Modeling Methods for Marine Science David M. Glover, William J. Jenkins, Scott C. Doney, 2011-06-02 This advanced textbook on modeling data analysis and numerical techniques for marine science has been developed from a course taught by the authors for many years at the Woods Hole Oceanographic Institute The first part covers statistics, singular value decomposition, error propagation, least squares regression, principal component analysis, time series analysis and objective interpolation The second part deals with modeling techniques, finite differences, stability analysis and optimization

The third part describes case studies of actual ocean models of ever increasing dimensionality and complexity starting with zero dimensional models and finishing with three dimensional general circulation models Throughout the book hands on computational examples are introduced using the MATLAB programming language and the principles of scientific visualization are emphasised Ideal as a textbook for advanced students of oceanography on courses in data analysis and numerical modeling the book is also an invaluable resource for a broad range of scientists undertaking modeling in chemical biological geological and physical oceanography

Applied Stochastic Modelling Byron J.T. Morgan,2008-12-02

Direct Methods for Sparse Linear Systems Timothy A. Davis,2006-01-01
Presents the fundamentals of sparse matrix algorithms to provide the requisite background The book includes CSparse a concise downloadable sparse matrix package that illustrates the algorithms and theorems presented in the book and equips readers with the tools necessary to understand larger and more complex software packages

Universality and Emergent Computation in Cellular Neural Networks Radu Dogaru,2003
Cellular computing is a natural information processing paradigm capable of modeling various biological physical and social phenomena as well as other kinds of complex adaptive systems The programming of a cellular computer is in many respects similar to the genetic evolution in biology the result being a proper cell design and a task specific gene How should one program the cell of a cellular computer such that a dynamic behavior with computational relevance will emerge What are the rules for designing a computationally universal and efficient cell The answers to those questions can be found in this book It introduces the relatively new paradigm of the cellular neural network from an original perspective and provides the reader with the guidelines for understanding how such cellular computers can be programmed and designed optimally The book contains numerous practical examples and software simulators allowing readers to experiment with the various phases of designing cellular computers by themselves
