## 1. INTRODUCTION

With the increase in the number of readers, better management of libraries system is required. The Library management system focuses on improving the management of libraries in a city or town. "What if you can check whether a book is available in the library through your phone?" or "what if instead of having different library cards for different libraries you can just have one?" or "you can reserve a book or issue a book from your phone sitting at your home?". The Integrated Library Management system provides you the ease of issuing, renewing, or reserving a book from an library within your town through your phone. The Integrated Library Management system is developed on the android platform which basically focuses on issuing, renewing and reserving a book.

### PURPOSE

The purpose of the project is to maintain the details of books and library members of different libraries. The main purpose of this project is to maintain a easy circulation system between clients and the libraries, to issue books using single library card, also to search and reserve any book from different available libraries and to maintain details about the user (fine, address, phone number). Moreover, the user can check all these features from their home.

### SCOPE

- Manually updating the library system into an android based application so that the user can know the details of the books available and maximum limit on borrowing from their computer and also through their phones.
- The ILM System provides information's like details of the books, insertion of new books, deletion of lost books, limitation on issuing books, fine on keeping a book more than one month from the issued date.
- Also user can provide feedback for adding some new books to the library.

Thayer,1990 *System and Software Requirements Engineering* Richard H. Thayer,Merlin Dorfman,1990 **Handbook for Evaluating Knowledge-Based Systems** Leonard Adelman,Sharon L. Riedel,1997-04-30 Knowledge based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use While there have been many successful applications of knowledge based systems some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two

audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences
