© 2015 American Institute of Engineering Technology and Applied Sciences, LLC. Course Director of Assessment (Peter DeGree) and David P. Ford (Director of Assessment) (Shenandoah Community College)

The core aim of instructional design is a learning activity: it organizes a set of tasks, in a set of places, in a set of times, to address a subset of students' learning outcomes. Learning activities vary widely, from the delivery of knowledge (lectures) to the development of student learning skills (problem solving). Activity design is most effective when it produces a path for the individual learner before generalizing, a path for generalization and finalization, and a path for assessment of the learning. This results generally in a series of more than fifty different activity types. It also provides recommendations for reflecting the activity types that are best demonstrated outside of class.

Need for Activity Design

Learning activities are used to address critical needed learning outcomes. In designing learning activities, designers take into account how learners make sense of new information, how they acquire new skills, or how they develop a new way of being (Barrabera, Brown, & Darling-Hammond, 2005). Learning activities need also to be designed so that the learning leads to the achievement of the course and program outcomes. Activity design is the process by which learning experiences are planned to systematically accomplish these two goals.

Characteristics of Effective Learning Activities

1. Align with course outcomes

Learning activities are designed to deliver learning that supports course outcomes. All learning activities should support course outcomes, and all course outcomes need to be supported by learning activities.

2. Focus on student learning

The purpose of any learning activity is student learning; all components of the activity should focus on that goal. *2.4.13 Overview of Learning Activities* (2015) contains and linking should support the learning outcomes identified for the activity. The user should see the writing for the student that they see in the *Assessments* (2015) (2015).

3. Have a compelling purpose

Activities cannot be successful if the students do not recognize their value and importance. *2.4.13 Overview of Learning Activities* (2015) and *2.4.13 Overview of Learning Activities* (2015) both address processes for communicating the purpose of the writing to students.

4. Have clear objectives

Each activity has the potential to provide a combination of information, active participation, and the opportunity to develop specific learning skills. These objectives need to be specifically identified. *2.4.13 Overview*

developed for writing specific learning outcomes and objectives are described in *2.4.13 Learning Objectives*.

5. Support the type of learning desired

The learning activity must be appropriate for the type of learning called for in the learning objectives. Not all courses, skills, processes, outcomes, ways of being, or roles are well served by the same types of learning activities. *2.4.13 Characteristics of Learning* (2015) describes different types of learning that belong to and is learning that type of activity.

6. Balance content and skill development

Learning objectives should specify the program balance between content and skill development. When a learner is engaged in something for the first time, content will typically receive most of the attention. Later, the learner will need to focus on developing skills by applying the new content.

7. Support the needs of diverse learning styles

Learners have a history of preferences for how they learn (see *Assessments* (2015) & *Assessments* (2015) (2015)
