Problem 1: Liquid Pressure
Continuation of Page 100

As you worked with the liquid pressure apparatus, you noticed that pressure increases with depth. This is because the weight of the liquid above exerts a downward force on the liquid below. The pressure at any point in a liquid is due to the weight of the liquid above it. The pressure at a point in a liquid is the same in all directions. This is because the liquid is equally dense in all directions. The pressure at a point in a liquid is the same at all points at the same depth. This is because the weight of the liquid above is the same at all points at the same depth.

Key Concept: Pressure
 Pressure is the force exerted per unit area. It is a scalar quantity. The pressure at a point in a liquid is the same in all directions. The pressure at a point in a liquid is the same at all points at the same depth.
