Distorted Reality:

Unified Reality Theory Steven Kaufman,2015-12-04 Unified Reality Theory demonstrates that the source of reality is a universal consciousness and that we are in no way separable from that source and so in no way truly separable from each other or any other aspect of reality I recommend this book to anyone interested in understanding the nature of reality and their place in it Deepak Chopra Unified Reality Theory describes how all reality evolves from an absolute existence It also demonstrates that this absolute existence must have consciousness as an attribute that is intrinsic to its being Thus Unified Reality Theory shows that consciousness rather than being a product of the evolution of physical reality is itself the source of what we experience as physical reality and that physical reality is itself but one aspect of an evolving universal consciousness Unified Reality Theory shows that most fundamentally this absolute consciousness existence evolves into reality by means of a single process self relation That is consciousness existence becomes reality by forming relationships with itself analogous in a very limited way to what happens to a rubber band that is twisted upon itself i e it remains whole while differentiating into other forms Thus Unified Reality Theory demonstrates that reality is a state of existential self relation The idea that the universe consists of existence which has formed relationships with itself isn't new Taoists have understood this idea for at least a couple of thousand years What is new here is the presentation of this idea in the form of a detailed and defined structural model that correlates with the behavior of physical reality as described by science in general and physics in particular Ultimately Unified Reality Theory uses science and logic to make the case that God exists as a pervasive and absolute consciousness that transcends the realities of space and time and that we as well as everything else are that

The Nature of Reality Steven E. Kaufman,2023-10-03 What is The Nature of Reality Contrary to what almost all human beings presently believe we do not live in a physical Universe because as The Nature of Reality explains physical reality is just an appearance that is being created by our minds and then superimposed by projection upon the non physical reality that is both actually there and what we really are The problem that arises as a result of believing physical reality to be the reality that is actually there is that that mistaken belief causes physical reality to function like a misperceived reflection to continuously obscure one's own reality from their awareness thereby effectively trapping one's awareness in what is nothing more than a mind generated experiential dream that is neither the reality that is actually there nor the reality that one really is The Nature of Reality was written to provide you with the opportunity to free yourself from that experiential dream and from the suffering being trapped in that dream produces by using fundamental scientific facts to demonstrate that physical reality is not the reality that is actually there where it appears to be so you can rid your mind of the false belief in physical reality that it is inadvertently using to convert physical reality into a delusion that continuously hides from your awareness the non physical reality you really are Whether you know it or not your awareness is presently trapping itself in a mind generated experiential dream as a function of what is nothing more than a mistaken belief The question is Are you ready to

loosen your grip on that belief so you can begin to wake up and become aware of the reality you really are

Ontology, Epistemology, and Teleology for Modeling and Simulation Andreas Tolk, 2012-08-10 In this book internationally recognized experts in philosophy of science computer science and modeling and simulation are contributing to the discussion on how ontology epistemology and teleology will contribute to enable the next generation of intelligent modeling and simulation applications It is well understood that a simulation can provide the technical means to display the behavior of a system over time including following observed trends to predict future possible states but how reliable and trustworthy are such predictions The questions about what we can know ontology how we gain new knowledge epistemology and what we do with this knowledge teleology are therefore illuminated from these very different perspectives as each experts uses a different facet to look at these challenges The result of bringing these perspectives into one book is a challenging compendium that gives room for a spectrum of challenges from general philosophy questions such as can we use modeling and simulation and other computational means at all to discover new knowledge down to computational methods to improve semantic interoperability between systems or methods addressing how to apply the recent insights of service oriented approaches to support distributed artificial intelligence As such this book has been compiled as an entry point to new domains for students scholars and practitioners and to raise the curiosity in them to learn more to fully address the topics of ontology epistemology and teleology from philosophical computational and conceptual viewpoints
