Problem Solving Text is an introductory textbook designed to make the subject accessible to college freshmen and
sophomores concurrent with their study of calculus The book provides the content to serve as the primary text for a standard
two semester advanced undergraduate course in mathematical probability and statistics It is organized specifically to meet
the needs of students who are preparing for the Society of Actuaries and Casualty Actuarial Society qualifying examination P
1 and the statistics component of CAS Exam 3L Sample actuarial exam problems are integrated throughout the text along
with an abundance of illustrative examples and 799 exercises The chapters on mathematical statistics cover all of the
learning objectives for the statistics portion of the Casualty Actuarial Society Exam ST syllabus Here again liberal use is
made of past exam problems from CAS Exams 3 and 3L A separate solutions manual for the text exercises is also available

Design and Analysis of Experiments, Volume 1 Klaus Hinkelmann, Oscar

Kempthorne, 2008-02-13 This user friendly new edition reflects a modern and accessible approach to experimental design and analysis Design and Analysis of Experiments Volume 1 Second Edition provides a general introduction to the philosophy theory and practice of designing scientific comparative experiments and also details the intricacies that are often encountered throughout the design and analysis processes With the addition of extensive numerical examples and expanded treatment of key concepts this book further addresses the needs of practitioners and successfully provides a solid understanding of the relationship between the quality of experimental design and the validity of conclusions This Second Edition continues to provide the theoretical basis of the principles of experimental design in conjunction with the statistical framework within which to apply the fundamental concepts The difference between experimental studies and observational studies is addressed along with a discussion of the various components of experimental design the error control design the treatment design and the observation design A series of error control designs are presented based on fundamental design principles such as randomization local control blocking the Latin square principle the split unit principle and the notion of factorial treatment structure This book also emphasizes the practical aspects of designing and analyzing experiments and features Increased coverage of the practical aspects of designing and analyzing experiments complete with the steps needed to plan and construct an experiment A case study that explores the various types of interaction between both treatment and blocking factors and numerical and graphical techniques are provided to analyze and interpret these interactions Discussion of the important distinctions between two types of blocking factors and their role in the process of drawing statistical inferences from an experiment A new chapter devoted entirely to repeated measures highlighting its relationship to split plot and split block designs Numerical examples using SAS to illustrate the analyses of data from various designs and to construct factorial designs that relate the results to the theoretical derivations Design and Analysis of Experiments Volume 1 Second Edition is an ideal textbook for first year graduate courses in experimental design and also serves as a practical hands on reference for statisticians and researchers across a wide array of subject areas including biological sciences engineering medicine pharmacology psychology and business
