

Exam question

Section A

The cue-dependent forgetting theory states you are less likely to forget, if the information to be recalled (remembered), is in the same environment (place) in which the information was originally learnt. If the environment is different where learning and recalling have taken place, you are more likely to forget the information. To test this theory, a psychologist carried out an experiment using two groups: both groups were seated in the classroom and the participants were shown a list of 20 words one at a time for a few seconds. Group B was then asked to leave and go to the library, while group A remain seated in the classroom. After sometime, both groups were asked to recall the words on a piece of paper. Below is a table of the results:

Condition A Number of Participants	Number of words recalled when recalling in the same place as learning (e.g. classroom)	Condition B Number of Participants	Number of words recalled when recalling in a different place (library) from learning (classroom)
1	12	11	7
2	11	12	9
3	10	13	7
4	9	14	8
5	13	15	6
6	7	16	8
7	9	17	11
8	8	18	9
9	12	19	6
10	10	20	10
Total numbers of words recalled	101	Total numbers of words recalled	81

Use the information above and table to answer the following questions:
