Direct and Large-Eddy Simulation VII Vincenzo Armenio, Bernard Geurts, Jochen Fröhlich, 2010-04-28 After Surrey in 1994 Grenoble in 1996 Cambridge in 1999 Enschede in 2001 Munich in 2003 and Poitiers in 2005 the 7th Workshop DLES7 will be held in Trieste again under the auspices of ERCOFTAC Following the spirit of the series the goal of this latest workshop is to establish a state of the art of DNS and LES techniques for the computation and modeling of transitional turbulent flows covering a broad scope of topics such as aerodynamics acoustics combustion multiphase flows environment geophysics and bio medical applications This gathering of specialists in the field should once again be a unique opportunity for discussions about the more recent advances in the prediction understanding and control of turbulent flows in academic or industrial situations

Direct and Large-Eddy Simulation XI Maria Vittoria Salvetti, Vincenzo Armenio, Jochen Fröhlich, Bernard J. Geurts, Hans Kuerten, 2019-02-02 This book gathers the proceedings of the 11th workshop on Direct and Large Eddy Simulation DLES which was held in Pisa Italy in May 2017 The event focused on modern techniques for simulating turbulent flows based on the partial or full resolution of the instantaneous turbulent flow structures as Direct Numerical Simulation DNS Large Eddy Simulation LES or hybrid models based on a combination of LES and RANS approaches In light of the growing capacities of modern computers these approaches have been gaining more and more interest over the years and will undoubtedly be developed and applied further The workshop offered a unique opportunity to establish a state of the art of DNS LES and related techniques for the computation and modeling of turbulent and transitional flows and to discuss about recent advances and applications This volume contains most of the contributed papers which were submitted and further reviewed for publication They cover advances in computational techniques SGS modeling boundary conditions post processing and data analysis and applications in several fields namely multiphase and reactive flows convection and heat transfer compressible flows aerodynamics of airfoils and wings bluff body and separated flows internal flows and wall turbulence and other complex flows

Solving Software Challenges for Exascale Stefano Markidis, Erwin Laure, 2015-02-18 This volume contains the thoroughly refereed post conference proceedings of the Second International Conference on Exascale Applications and Software EASC 2014 held in Stockholm Sweden in April 2014 The 6 full papers presented together with 6 short papers were carefully reviewed and selected from 17 submissions They are organized in two topical sections named toward exascale scientific applications and development environment for exascale applications

Seventh IUTAM Symposium on Laminar-Turbulent Transition Philipp Schlatter, Dan S. Henningson, 2010-03-11 The origins of turbulent flow and the transition from laminar to turbulent flow are the most important unsolved problems of fluid mechanics and aerodynamics since being a fundamental question of fluid mechanics there are numerous applications relying on information regarding transition location and the details of the subsequent turbulent flow For example the control of transition to turbulence is especially important in 1 skin friction reduction of energy efficient aircraft 2 the performance of heat

exchangers and diffusers 3 propulsion requirements for personic aircraft and 4 separation control While considerable progress has been made in the science of laminar to turbulent transition over the last 30 years the continuing increase in computer power as well as new theoretical developments are now revolutionizing the area It is now starting to be possible to move from simple 1D eigenvalue problems in canonical flows to global modes in complex flows all accompanied by accurate large scale direct numerical simulations DNS Here novel experimental techniques such as modern particle image velocimetry PIV also have an important role Theoretically the influence of non normality on the stability and transition is gaining importance in particular for complex flows At the same time the enigma of transition in the oldest flow investigated Reynolds pipe flow transition experiment is regaining attention Ideas from dynamical systems together with DNS and experiments are here giving us new insights

Advances in Turbulence XI J. M. L. M. Palma, A. Silva Lopes, 2008-01-08 This volume comprises the communications presented at the ETC 11 the EUROMECH European Turbulence conference held in 2007 in Porto The scientific committee has chosen the contributions out of the following topics Acoustics of turbulent flows Atmospheric turbulence Control of turbulent flows Geophysical and astrophysical turbulence Instability and transition Intermittency and scaling Large eddy simulation and related techniques MHD turbulence Reacting and compressible turbulence Transport and mixing Turbulence in multiphase and non Newtonian flows Vortex dynamics and structure formation Wall bounded flows

Direct and Large Eddy Simulation XII Manuel García-Villalba, Hans Kuerten, Maria Vittoria Salvetti, 2020-05-09 This book gathers the proceedings of the 12th instalment in the bi annual Workshop series on Direct and Large Eddy Simulation DLES which began in 1994 and focuses on modern techniques used to simulate turbulent flows based on the partial or full resolution of the instantaneous turbulent flow structure With the rapidly expanding capacities of modern computers this approach has attracted more and more interest over the years and will undoubtedly be further enhanced and applied in the future Hybrid modelling techniques based on a combination of LES and RANS approaches also fall into this category and are covered as well The goal of the Workshop was to share the state of the art in DNS LES and related techniques for the computation and modelling of turbulent and transitional flows The respective papers highlight the latest advances in the prediction understanding and control of turbulent flows in academic and industrial applications

Advances in Turbulence V Roberto Benzi, 2012-12-06 Under the auspices of the Euromech Committee the Fifth European Turbulence Conference was held in Siena on 5-8 July 1994 Following the previous ETC meeting in Lyon 1986 Berlin 1988 Stockholm 1990 and Delft 1992 the Fifth ETC was aimed at providing a review of the fundamental aspects of turbulence from a theoretical numerical and experimental point of view In the magnificent town of Siena more than 250 scientists from all over the world spent four days discussing new ideas on turbulence As a research worker in the field of turbulence I must say that the works presented at the Conference on which this book is based covered almost all areas in this field I also think that this book provides a major opportunity to have a complete overview of the most recent research works I am extremely grateful to

Prof C Cercignani Dr M Loffredo and Prof R Piva who as members of the local organizing committee share the success of the Conference I also want to thank Mrs Liu Catena for her invaluable contribution to the work done by the local organizing committee and the European Turbulence Committee in the scientific organization of the meeting The Servizio Congressi of the University of Siena provided perfect organization in Siena and wonderful hospitality The Conference has been supported by CNR Cira Alenia the Universities of Rome Tor Vergata and La Sapienza *Applied Mechanics Reviews* ,2000
