

FLUID MECHANICS

1. FLUID MECHANICS

- The liquids and gases together are termed as fluids, in other words, we can say that the substances which can flow are termed as fluids.
- We assume fluid to be incompressible (i.e., the density of liquid is independent of variation in pressure and remains constant) and non-viscous (i.e. the two liquid surfaces in contact are not exerting any tangential force on each other).

1.1 Fluid Statics

1.1.1 Fluid Pressure

Pressure p at every point is defined as the normal force per unit area.

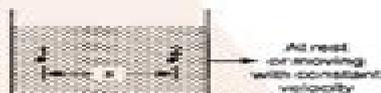

$$p = \frac{dF_{\perp}}{dA}$$

The SI unit of pressure is the Pascal and $1 \text{ Pascal} = 1 \text{ N/m}^2$

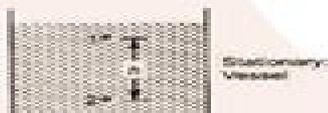

- Fluid force acts perpendicular to any surface in the fluid, no matter how that surface is oriented. Hence pressure, has no intrinsic direction of its own, it is a scalar.

Pressure

- (a) Pressure at two points in a horizontal plane or at same level when the fluid is at rest or moving with constant velocity is same.

- (b) Pressure at two points which are at a depth separation of h when fluid is at rest or moving with constant velocity is related by the expression

$p_2 - p_1 = \rho gh$, where ρ is the density of liquid.

- (c) Pressure at two points in a horizontal plane when fluid container is having some constant horizontal acceleration are related by the expression

$p_1 - p_2 = \rho a$

and $\tan \theta = a/g$, where θ is the angle which the liquid's free surface is making with horizontal.

- (d) Pressure at two points within a liquid at vertical separation of h when the liquid container is accelerating up are related by expression

$$p_2 - p_1 = \rho(g + a)h$$

If container is accelerating down, then $p_2 - p_1 = \rho(g - a)h$.

1.1.2 Atmospheric Pressure

- It is the pressure of the earth's atmosphere. Normal atmospheric pressure at sea level (an average value) is 1 atmosphere (atm) that is equal to $1.013 \times 10^5 \text{ Pa}$.
- The excess pressure above atmospheric pressure is called gauge pressure, and total pressure is called absolute pressure.
- Barometer is a device used to measure atmospheric pressure while U-tube manometer or simply manometer is a device used to measure the gauge pressure.

1.1.3 Pascal's Law

- A change in the pressure applied to an enclosed fluid is transmitted undiminished to every portion of the fluid and to the walls of the containing vessel.
- There are a lot of practical applications of Pascal's law one such application is hydraulic lift.

1.1.4 Archimedes Principle

- When a body is partially or fully dipped into a fluid, the fluid exerts contact force on the body. The resultant of all these contact forces is called buoyant force (upthrust).
- $F =$ weight of fluid displaced by the body.
- This force is called buoyant force and acts vertically upwards (opposite to the weight of the body) through the centre of gravity of the displaced fluid.

$$F = V\rho g$$

where, $v =$ volume of liquid displaced

$\rho =$ density of liquid.

Advances in Condition Monitoring of Machinery in Non-Stationary Operations Giorgio Dalpiaz, Riccardo Rubini, Gianluca D'Elia, Marco Cocconcelli, Fakher Chaari, Radoslaw Zimroz, Walter Bartelmeus, Mohamed Haddar, 2013-10-05 This book presents the proceedings of the third edition of the Condition Monitoring of Machinery in Non-Stationary Operations (CMMNO13) which was held in Ferrara, Italy. This yearly event merges an international community of researchers who met in 2011 in Wroclaw, Poland and in 2012 in Hammamet, Tunisia to discuss issues of diagnostics of rotating machines operating in complex motion and/or load conditions. The growing interest of the industrial world on the

topics covered by the CMMNO13 involves the fields of packaging automotive agricultural mining processing and wind machines in addition to that of the systems for data acquisition The participation of speakers and visitors from industry makes the event an opportunity for immediate assessment of the potential applications of advanced methodologies for the signal analysis Signals acquired from machines often contain contributions from several different components as well as noise Therefore the major challenge of condition monitoring is to point out the signal content that is related to the state of the monitored component particularly in non stationary conditions
