**Boundary Integral Equations** Sergej Rjasanow, Olaf Steinbach, 2007-04-17 Boundary Element Methods BEM play an important role in modern numerical computations in the applied and engineering sciences These methods turn out to be powerful tools for numerical studies of various physical phenomena which can be described mathematically by partial differential equations The most prominent example is the potential equation Laplace equation which is used to model physical phenomena in electromagnetism gravitation theory and in perfect fluids A further application leading to the Laplace equation is the model of steady state heat flow One of the most popular applications of the BEM is the system of linear elastostatics which can be considered in both bounded and unbounded domains A simple model for a fluid flow the Stokes system can also be solved by the use of the BEM The most important examples for the Helmholtz equation are the acoustic scattering and the sound radiation The Fast Solution of Boundary Integral Equations provides a detailed description of fast boundary element methods which are based on rigorous mathematical analysis In particular a symmetric formulation of boundary integral equations is used Galerkin discretisation is discussed and the necessary related stability and error estimates are derived For the practical use of boundary integral methods efficient algorithms together with their implementation are needed The authors therefore describe the Adaptive Cross Approximation Algorithm starting from the basic ideas and proceeding to their practical realization Numerous examples representing standard problems are given which underline both theoretical results and the practical relevance of boundary element methods in typical computations

Hynd, 2013-12-16 Perspectives on Conceptual Change presents case study excerpts illustrating the influence on and processes of students conceptual change and analyses of these cases from multiple theoretical frameworks Researchers in reading education have been investigating conceptual change and the effects of students prior knowledge on their learning

for more than a decade During this time this research had been changing from the general and cognitive average effects of interventions on groups of students to the specific and personal individuals reactions to and conceptual change with text structures Studies in this area have begun to focus on the social contextual and affective influences on conceptual change These studies have potential to be informed by other discourses Hence this book shows the results of sharing data in the form of case study excerpts with researchers representing varying perspectives of analyses Instances of learning are examined from cross disciplinary views Case study authors in turn respond to the case analyses The result is a text that provides multiple insights into understanding the learning process and the conditions that impact learning
