Lectures on Formal Methods and Performance Analysis Ed Brinksma,Holger Hermanns,Joost-Pieter Katoen,2003-06-29
Traditionally models and methods for the analysis of the functional correctness of reactive systems and those for the analysis of their performance and pendability aspects have been studied by di erent research communities This has resulted in the development of successful but distinct and largely unrelated modeling and analysis techniques for both domains In many modern systems however the di erence between their functional features and their performance properties has become blurred as relevant functionalities become inextricably linked to performance aspects e g isochronous data transfer for live video tra mission During the last decade this trend has motivated an increased interest in c bining insights and results from the eld of formal methods traditionally cused on functionality with techniques for performance modeling and analysis Prominent examples of this cross fertilization are extensions of process algebra and Petri nets that allow for the automatic generation of performance models the use of formal proof techniques to assess the correctness of randomized gorithms and extensions of model checking techniques to analyze performance requirements automatically We believe that these developments markthe ginning of a new paradigm for the modeling and analysis of systems in which qualitative and

quantitative aspects are studied from an integrated perspective We are convinced that the further worktowards the realization of this goal will be a growing source of inspiration and progress for both communities
