Spatial Modelling of Flood Risk and Flood Hazards Biswajeet Pradhan, Pravat Kumar Shit, Gouri Sankar Bhunia, Partha Pratim Adhikary, Hamid Reza Pourghasemi, 2022-04-06 Floods and flash floods with hydro meteorological and tropical cyclones are some of the most devastating natural disasters causing massive damages to natural and man-made features. Flood hazards are a major threat to human life, properties, agricultural area yield, production, buildings, and homes and infrastructures, bridges, roads, railways, urban infrastructures, etc. Flood hazards susceptibility mapping, risk assessment, and modelling is an essential step for early warning systems, emergency services, prevention, and mitigation of future environmental and social hazards and implementation of risk management strategies. Due to the lack of proper information technology-based policies and strategies, mapping and modelling can often not be implemented to the best possible level. Geo-spatial techniques have enjoyed rising interest in recent decades among the earth, environmental, and social sciences research communities for their powerful ability to solve and understand various complex problems and develop novel approaches toward sustainable earth and human society. By linking geo-spatial computational intelligence techniques with societal and environmental-oriented problems, this book demonstrates geospatial technology approaches to data mining, techniques, data analysis, modelling, risk assessment, and visualization and management strategies in different aspects of flood hazards. We believe that a diverse group of academics, scientists, geographers, hydrologists, remote sensing, and GIS expertise, environmentalists, meteorologists, and computing experts with a common interest in geospatial sciences within the earth, environmental sciences, and humanistic and social sciences will find this book to be of great value. **Micro and**
