Signaling Pathways in Plants, 2014-09-09 This special issue of The Enzymes is targeted towards researchers in biochemistry molecular and cell biology pharmacology and cancer This volume discusses signaling pathways in plants Contributions from leading authorities Informs and updates on all the latest developments in the field Stomatal Biology and Beyond Wenxiu Ye, Juan Dong, Toshinori Kinoshita, 2022-03-08 *Salt and Drought Stress Tolerance in Plants* Mirza Hasanuzzaman, Mohsin Tanveer, 2020-04-10 This book presents various aspects of salt and drought stress signaling in crops combining physiological biochemical and molecular studies Salt and drought stress are two major constraints on crop production worldwide Plants possess several mechanisms to cope with the adverse effects of salt and drought Among these mechanisms stress signaling is very important because it integrates and regulates nuclear gene expression and other cellular activities which can help to restore cellular homeostasis Accordingly understanding the signaling cascades will help plant biologists to grasp the tolerance mechanisms that allow breeders to develop tolerant crop varieties This book is an essential resource for researchers and graduate students working on salt and drought stress physiology and plant breeding

**Survival Strategies in Extreme Cold and Desiccation** Mari Iwaya-Inoue, Minoru Sakurai, Matsuo Uemura, 2018-10-04 This book comprehensively describes biological phenomena adaptation mechanisms and strategies of living organisms to survive under extremely cold or desiccated conditions at molecular cellular and organ levels It also provides tremendous potential for applications of the findings to a wide variety of industries The volume consists of three parts Part 1 Adaptation Mechanisms of Cold and Part 2 Adaptation Mechanisms of Desiccation collect up to date research on mechanisms and strategies of living organisms such as sleeping chironomids polar marine fishes hibernating mammals bryophytes dormant seeds and boreal plants to survive under extreme cold and desiccated conditions at molecular cellular and organ levels Part 3 Application Technologies from Laboratory to Society covers various applications to a wide variety of industries such as the medical food and agricultural and life science industries For example biological knowledge of how plants and animals survive under cold drought and desiccated conditions may provide a hint on how we can improve crop production in a very fragile environment in global climate change Unique molecules that protect cells during desiccation and freezing such as trehalose and antifreeze protein AFP have potential for use to preserve cells tissues and organs for the long term under very stable conditions In addition the current progress of supercooling technology of cells may lead us to solve problems of cellular high sensitivity to freezing injury which will dramatically improve the usability of these cells Furthermore knowledge of water substitution and glass formation as major mechanisms for formulation designs and new drying technologies will contribute to the development of food preservation and drug delivery systems under dry conditions Written by contributors who have been conducting cutting edge science in related fields this title is recommended to a wide variety of readers who are interested in learning from such organisms their strategies mechanisms and applications and it will inspire researchers in various
