### **Geospatial Abduction** Paulo Shakarian, V.S.

Subrahmanian, 2011-10-20 Imagine yourself as a military officer in a conflict zone trying to identify locations of weapons caches supporting road side bomb attacks on your country's troops Or imagine yourself as a public health expert trying to identify the location of contaminated water that is causing diarrheal diseases in a local population Geospatial abduction is a new technique introduced by the authors that allows such problems to be solved Geospatial Abduction provides the mathematics underlying geospatial abduction and the algorithms to solve them in practice it has wide applicability and can be used by practitioners and researchers in many different fields Real world applications of geospatial abduction to military problems are included Compelling examples drawn from other domains as diverse as criminology epidemiology and archaeology are covered as well This book also includes access to a dedicated website on geospatial abduction hosted by University of Maryland Geospatial Abduction targets practitioners working in general AI game theory linear programming data mining machine learning and more Those working in the fields of computer science mathematics geoinformation geological and biological science will also find this book valuable

**NEO 2016** Yazmin Maldonado, Leonardo Trujillo, Oliver Schütze, Annalisa Riccardi, Massimiliano Vasile, 2017-09-12 This volume comprises a selection of works presented at the

Numerical and Evolutionary Optimization NEO 2016 workshop held in September 2016 in Tlalneantla Mexico The development of powerful search and optimization techniques is of great importance in today's world and requires researchers and practitioners to tackle a growing number of challenging real world problems In particular there are two well established and widely known fields that are commonly applied in this area i traditional numerical optimization techniques and ii comparatively recent bio inspired heuristics Both paradigms have their unique strengths and weaknesses allowing them to solve some challenging problems while still failing in others The goal of the NEO workshop series is to bring together experts from these and related fields to discuss compare and merge their complementary perspectives in order to develop fast and reliable hybrid methods that maximize the strengths and minimize the weaknesses of the underlying paradigms In doing so NEO promotes the development of new techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding and adequate treatment of real world problems particularly in emerging fields that affect all of us such as healthcare smart cities big data among many others The extended papers presented in the book contribute to achieving this goal

Congressus Numerantium, 1970 *Metaheuristics* Marc Sevaux, Alexandru-Liviu Olteanu, Eduardo G. Malek, 2008-05-19 Illustrating the relevance of linear approximation in a variety of fields Numerical Linear Approximation in C presents a unique collection of linear approximation algorithms that can be used to analyze model and compress discrete data Developed by the lead author the algorithms have been successfully applied to several engineering projects Approximation Algorithms, 1997 Solutions Manual [for] Computer Arithmetic Algorithms [by] Israel Koren Sachin Ghanekar, Israel Koren, 1993 **New Rounding Techniques for the Design and Analysis of Approximation Algorithms** Shayan Oveis Gharan, 2013 We study two of the most central classical optimization problems namely the Traveling Salesman problems and Graph Partitioning problems and develop new approximation algorithms for them We introduce several new techniques for rounding a fractional solution of a continuous relaxation of these problems into near optimal integral solutions The two most notable of those are the maximum entropy rounding by sampling method and a novel use of higher eigenvectors of graphs **Approximation Algorithms for Covering Problems** Christos Koufogiannakis, 2009 Then we show distributed versions of the sequential algorithm For W EIGHTED VERTEX COVER we give a distributed 2 approximation algorithm taking  $O(\log n)$  rounds The algorithm generalizes to covering mixed integer

linear programs CMIP with two variables per constraint Delta 2 For any MONOTONE COVERING problem we show a distributed Delta approximation algorithm taking  $O(\log 2)$  Special characters omitted rounds where Special characters omitted is the number of constraints Last we extend the distributed algorithms for covering to compute Delta approximate solutions for FRACTIONAL PACKING and MAXIMUM WEIGHTED b MATCHING in hypergraphs where Delta is the maximum number of packing constraints in which a variable appears for MAXIMUM WEIGHTED b MATCHING Delta is the maximum edge degree for graphs Delta 2

**Algorithms for Approximation** J.C. Mason, M.G. Cox, 1990-05-15 This volume comprises the proceedings of the second Shrivvenham conference on Algorithms for Approximation The term approximation here refers to the approximation of functions and data by similar functions and leads to such topics as curve and surface fitting spline and piecewise polynomial methods finite element modelling and computer aided design Applications are given to a wide variety of areas such as surveying meteorology radar antenna and acoustic array design topography engineering metrology and CAD CAM Emphasis at the meeting was placed on the development of useful algorithms and on practical applications in defence and industry In addition some 40 submitted papers were selected and presented on a multitude of topics such as multivariate interpolation optimization methods constrained problems spline fitting data modelling and applications in microwave measurement isotropic antennas sound measurement and digitized contours
