Series Arc Detection System Ayman M. OTHMAN MOHAMED,2015 Protection from electric power hazardous has been used ever since applications of electricity were discovered Hazards in the electric system can be in the form of over voltage or over current leading to catastrophic system and equipment failure resulting in physical damage or even to human fatalities Electrical protection is achieved by installing protection devices throughout distribution system to isolate faulty branches and mitigate fault development Fire is a principal cause of buildings damages and related personal injuries A major contributor to buildings fire originates from electrical arc faults caused by electric distribution equipment and appliances failures To remedy this problem regulatory bodies required electric arc faults protection Over the years this requirement was enforced by different electric codes and expanded to cover most of residential building areas and all living spaces Arc fault circuit interrupters AFCI are devised to complement existing protection methodologies and devices focusing on electric arc detection and preventions of subsequent risks mainly fire ignition Circuit interruption occurs whenever characteristics of arc failure is detected either from current voltage or electromagnetic radiation Detecting the arc faults and hence increasing the reliability of interruption is a challenge given that some household appliances produce arc like behaviors in normal operating conditions like electronic light dimmers and solid state controlled variable speed drives This research focuses on developing an intelligent low voltage series arcing detection scheme based on pattern recognition with immunity to false tripping This point is the main drawback of most published work and issued patents on arc detection to date mainly due to the difficulty of modelling such a transient behavior especially on low current arc cases Real data is generated in lab simulating series arc conditions at different combinations of linear and non linear loads Appliances current are recorded as well Two disjoint datasets are used for training and testing of the proposed system with no components shared between the two datasets to

verify classifier generality The proposed pattern recognition method proved to be highly immune to false tripping in line with benchmark regulatory standard and can be adapted to similar hard to model non stationary problems Amusemens d'un prisonnier ,1751 **Arc-fault Detection and Mitigation** ,2016 **Field Testing of Automated Fault Detection and Diagnosis (AFDD) Tools for Commercial Rooftop Heating, Ventilation, Air-conditioning, and Refrigeration Systems** Annika Hacker,2019 Rooftop units make up more than 60% of cooling systems in commercial buildings However though expected to be efficient majority have at least one often more faults such as valve leakage incorrect refrigerant charge fouled condenser evaporator or expansion faults Most faults are never detected until a major malfunction or a failure of the entire system Automated fault detection and diagnosis AFDD tools constantly monitor system s performance and detect anomalies in the sensed data allowing early problem detection Using AFDD extends the life and health of the system and helps save energy While there is an increased interest in implementing these tools their technical performance has not been verified in the field This thesis is the first karge scale field test and evaluation of AFDD tools determining their technical performance The scope of this work includes the development of specifications for evaluation and selection of AFDD products to be verified development of a site selection criteria for site host requirements and development of a measurement and verification plan installation and base line evaluation of AFDD products at 5 sites **Low Cost Arc Fault Detection and Protection for PV Systems** :.
