Applied System Simulation Mohammad S. Obaidat, Georgios I. Papadimitriou, 2012-12-06 Simulation and modeling are efficient techniques that can aid the city and regional planners and engineers in optimizing the operation of urban systems such as traffic light control highway toll automation consensus building public safety and environmental protection When modeling transportation systems such as freeway systems arterial or downtown grid systems the city planner and engineer is concerned with capturing the varied interactions between drivers automobiles and the infrastructure Modeling and simulation are used to effectively optimize the design and operation of all of these urban systems It is possible that in an urban simulation community workshop citizens can work interactively in front of computers and be able using the click of the mouse to walk up to their own front porch looking at the proposed shopping mall alternatives across the street from virtually any angle and proposed bridge or tunnel and see how it can reduce traffic congestion Buildings can be scaled down or taken out their orientation can be changed in order to check the view and

orientation in order to have better site with efficient energy conservation The stone or brick material on a building can be replaced by colored concrete or more trees and lampposts can be placed on the site Such flexibility in simulation and animation allows creative ideas in the design and orientation of urban sites to be demonstrated to citizens and decision makers before final realization
