Renewable Energy in East Asia Christopher M. Dent, 2014-11-27 Energy is crucial to the functioning of any human society and central to understanding East Asia's economic miracle The region's rapid development over the last few decades has been inherently energy intensive and the impact on global energy security climate change and the twenty first century global system generally is now very significant and will become more so over foreseeable years and decades to come The region is already the world's largest energy consumer and greenhouse gas emitter so establishing cleaner energy systems in East Asia is both a regional and global challenge and renewable energy has a critically important part to play in meeting it This book presents a comprehensive study of renewable energy development in East Asia It begins by examining renewable energy development in global and historic contexts and situates East Asia's position in the recent worldwide expansion of renewables This same approach is applied on sector specific chapter studies on wind solar hydropower geothermal ocean wave and tidal and bioenergy and to general trends in renewable energy policy Governments play a critical role in promoting renewables and their contribution to tackling climate change and other environmental challenges Christopher M Dent argues this is particularly relevant to East Asia where state capacity practice has been increasingly allied to ecological modernisation thinking to form what he calls new developmentalism the principal foundation on which renewables have developed in the region as well as how East Asia's low carbon development is being generally promoted Renewable Energy in East Asia will be of huge interest to students and scholars of Asian studies economics political economy energy studies business development international relations and environmental studies It will also appeal to researchers working on the subject matter in government business international organisations think tanks and civil society organisations

Disruptive Innovation in Chinese and Indian Businesses Peter Ping Li, 2013-03-12 With the rapid development of China and India as new economic

powers in global competition an obvious question is whether these emerging economies are great opportunities or threats Whilst answers are bound to differ depending on one's perspective it is increasingly clear that more local firms especially local entrepreneurs from these emerging economies will play a more critical role in global competition by becoming challengers to global incumbents Indeed the fact that the majority of their populations are at the bottom of the pyramid and thus cannot afford products designed for the developed markets has made these emerging economies fertile ground for developing and applying disruptive innovations A novel mix of key attributes distinctive from those of established technologies or business models disruptive innovations are typically inferior yet affordable and good enough products or services which originate in lower end market segments but later move up to compete with those provided by incumbent firms This book sheds new light on disruptive innovations both from and for the bottom of the pyramid in China and India from the point of view of local entrepreneurs and international firms seeking to operate their businesses there It covers both the theoretical and practical implications of disruptive innovation using conceptual frameworks alongside detailed case studies whilst also providing a comparison of conditions and strategic options in India and China Further unlike existing studies this book focuses on the neglected perspective of local challengers as the primary players and in doing so reveals the extent to which the future landscape of global competition may be shaped by disruptive innovation as well as its capacity to make the world flatter and more sustainable This unique book will be valuable to both scholars and practitioners interested in disruptive innovation and those working in the fields of Asian studies international business economics and globalization
