Bim For Facility Managers:

BIM for Facility Managers IFMA,2013-04-03 A practical look at extending the value of Building Information Modeling BIM into facility management from the world's largest international association for professional facility managers Building owners and facility managers are discovering that Building Information Modeling BIM models of buildings are deep reservoirs of information that can provide valuable spatial and mechanical details on every aspect of a property When used appropriately this data can improve performance and save time effort and money in running and maintaining the building during its life cycle It can also provide information for future modifications For instance a BIM could reveal everything from the manufacturer of a light fixture to its energy usage to maintenance instructions BIM for Facility Managers explains how BIM can be linked to facility management FM systems to achieve very significant life cycle advantages It presents guidelines for using BIM in FM that have been developed by public and private owners such as the GSA There is an extensive discussion of the legal and contractual issues involved in BIM FM integration It describes how COBie can be used to name capture and communicate FM related data to downstream systems There is also extensive discussion of commercial software tools that can be used to facilitate this integration This book features six in depth case studies that illustrate how BIM has been successfully integrated with facility management in real life projects at Texas A M Health Science Center USC School of Cinematic Arts MathWork's new campus Xavier University State of Wisconsin Facilities University of Chicago Library renovation BIM for Facility Managers is an indispensable resource for facility managers building owners and developers alike

Knowledge Management and Information Tools for Building Maintenance and Facility Management Cinzia Talamo,Marcella Bonanomi,2015-10-29 This book describes the latest methods and tools for the management of information within facility management services and explains how it is possible to collect organize and use information over the life cycle of a building in order to optimize the integration of these services and improve the efficiency of processes The coverage includes presentation and analysis of basic concepts procedures and international standards in the development and management of real estate inventories building registries and information systems for facility management Models of strategic management are discussed and the functions and roles of the strategic management center explained Detailed attention is also devoted to building information modeling BIM for facility management and potential interactions between information systems and BIM applications Criteria for evaluating information system performance are identified and guidelines of value in developing technical specifications for facility management services are proposed The book will aid clients and facility managers in ensuring that information bases are effectively compiled and used in order to enhance building maintenance and facility management

BIM-based Life Cycle Information Management Rui Liu,2012 The AEC industry has raised a good deal of interest surrounding the use of BIM for facility management The opportunities for leveraging BIM for facility operations are compelling but the utilization of BIM in facility management is lagging behind BIM

implementation in the design and construction phases On one hand designers and constructors seldom know what documents and other varieties of information are needed for the facility management phase On the other hand a limited degree of experience in the operation and maintenance knowledge of these existing buildings is fed back to the design phase This research is aimed to bridge the communication gap between design and facility management professionals Through available BIM extension development tools information exchange and knowledge sharing can be attained for both these essential partners in the construction industry The expected result would be a platform that can transfer information bi directionally between design and facility management professionals Through literature review interviews and surveys with industry professionals the requirements for facility operation and maintenance were determined A facility management template has been developed¹³ that carries the information needed by facility managers as well as a predefined list for maintenance management in design tools such as Revit Moreover for maintainability checking rule sets for model checker applications to gauge the accessibility of maintenance activity were created by using the Revit API and Solibri Model Checker A relief fan case of accessibility problems was studied to illustrate and validate the Revit Add In tool Accessibility Checker
