Approach presents how machine learning and biomedical signal processing methods can be used in biomedical signal analysis. Different machine learning applications in biomedical signal analysis including those for electrocardiogram, electroencephalogram, and electromyogram are described in a practical and comprehensive way helping readers with limited knowledge. Sections cover biomedical signals and machine learning techniques: biomedical signals such as electroencephalogram (EEG), electromyogram (EMG), and electrocardiogram (ECG); different signal processing techniques: signal de-noising, feature extraction, and dimension reduction techniques such as PCA, ICA, KPCA, MSPCA, entropy measures, and other statistical measures, and more. This book is a valuable source for bioinformaticians, medical doctors, and other members of the biomedical field who need a cogent resource on the most recent and promising machine learning techniques for biomedical signals analysis. Provides comprehensive knowledge in the application of machine learning tools in biomedical signal analysis for medical diagnostics, brain computer interface, and man machine interaction. Explains how to apply machine learning techniques to EEG, ECG, and EMG signals. Gives basic knowledge on predictive modeling in biomedical time series and advanced knowledge in machine learning for biomedical time series.

eHealth and Remote Monitoring Amir Hajjam El Hassani, 2012-09-12

eHealth initiatives, many of which are being undertaken in countries around the globe, have myriad benefits including improvement of coordination and integration of health care, delivery empowerment of individuals and families for helping them manage their own health better, and preparation of health care plans and facilitation of public health initiatives. eHealth are not simply a technology but a complex technological and relational process. In this sense, clinicians and health care providers who seek to successfully exploit eHealth should pay special attention to technology, ergonomics, human factors, and organizational changes associated with the structure of the relevant health service. This book gives an overview of the impact of eHealth systems on access to health care, quality of information, health care cost, effectiveness of health care services, and the development of eHealth equipment.

Neurophysiological Monitoring During Intensive Care and Surgery N. Jollyon Smith, Mark van Gils, Pamela Prior, 2006

This title enables readers to understand how to undertake appropriate neurophysiological investigations in the critical care setting. The book addresses the scientific principles, biological and technological recording techniques, the development of electrical potentials in normal subjects, and the ways these are disturbed by trauma, surgery, and disease. The impact of digital technologies and the possibilities of quantification, statistical treatment, and advanced signal processing techniques have enabled practitioners to work to more rigorous scientific standards. The increasing availability of such tools in daily clinical work means that patients can now benefit from investigations of known specificity and sensitivity.
