

GENETIC ENGINEERING

Genetic Engineering

- is a process of making changes on the genetic code of an organism. Its goal is to add one or more new traits that are not normally found in that organism. Through advanced studies in the structure of DNA and its chemical properties, scientists have been able to employ different techniques to extract, cut, and make unlimited copies of DNA.

The Importance And The Essence Of Genetic Engineering

DNA recombination - is a process of modifying the genes of organisms for practical purposes. It is done when a piece of DNA is combined with another DNA from another source. The resulting genetic product is called **recombinant DNA**. With this process, organisms get to have traits that are not normally found in their species.

- **Genetic engineering:** Changing the DNA in living organisms to create something new.
- These organisms are called **Genetically Modified Organism (GMO)**
- **Genetically Modified Organisms** are called **transgenic organism**, since genes are transferred from one organism to another.

Genetic Engineering Techniques

- I. **Artificial Selection:** breeders choose which organism to mate to produce offspring with desired traits.
 - They cannot control what genes are passed.
 - When they get offspring with the desired traits, they maintain them.

Three types of Artificial Selection:

- A. **Selective breeding:** when animals with desired characteristics are mated to produce offspring with those desired traits.
 - Passing important genes to the next generation.
 - Selective breeding occurs when you choose the best male and female to breed.
 - This allows you to fine tune and control the traits
 - The offspring or babies will then have the best traits.
 - Then you continue to breed those organisms with the best traits, those traits will be maintained.
- B. **Hybridizations:** two individuals with unlike characteristics are crossed to produce the best in both organisms.
- C. **Inbreeding:** breeding of organisms that are genetically similar to maintain desired traits.

Armed Forces: Instrument of Peace, Strength, Development and Prosperity Joseph Babatunde Fagoyinbo, 2013 Across the ages technological developments have been accelerated by the military This results from the fact that able bodied vibrant youths are generally involved and are also exposed to high tech training prevailing at their times for assignments defence and security that are essential but not desired They form the Armed Forces for the nations Such brilliant military officers like Caesar and Napoleon made their marks and in contemporary times the Armed Forces of United States France Britain Australia etc are making remarkable contributions to technological developments Such infrastructure as the Internet the GPS and the cell phones are products that have significant military contributions This book scans across the major regions of the world highlights the efforts of representative countries in the regions and observes that nations that have harnessed the

efforts of their Armed Forces have progressively developed. It is also observed that developments in America and Europe though not entirely dependent on their Armed Forces have been greatly affected by their efforts. In Asia such countries as the People's Republic of China, Brazil, India, Pakistan, and Singapore utilise the human and material resources within the Armed Forces for national growth and cohesion. Development effort is least in the African Region except South Africa and Egypt notwithstanding the high potentials as exhibited by Nigeria's Armed Forces. Although attempts to industrialise through the Armed Forces may be able to create economic development for developing nations, such factors as historical background, economic resources, political climate, government policies, and infrastructure are equally important. Economic development programme of an aspiring country should:

- i promote education and access to knowledge
- ii aspire to economic self-sufficiency in economic power
- iii allow and promote private sector and foreign participation in defence production research and development
- iv commit itself to the establishment and support of defence industries
- v indigenise defence programmes
- vi establish a balance between military and economic development and mobilise the nation's economy through technology partnership with the private sector and foreign investors

The Right to Food and the TRIPS Agreement Hans Morten Haugen, 2007-10-30. A concise analysis of the relationship between patent rights and human rights is given in this book focusing on the right to food. The UN Sub-Commission on Human Rights identified apparent conflicts or actual or potential conflicts between human rights and intellectual property rights. The TRIPS Agreement under the WTO Agreement and the International Covenant on Economic, Social and Cultural Rights constitute the central treaties in the analysis. The book finds that the right to food and related human rights of the Covenant give important guidance when implementing intellectual property legislation and science policy in general. Moreover, the book does not find that the two treaties actually conflict. There are, however, concerns regarding the national implementation of the treaties.
