**The Coding Manual for Qualitative Researchers** Johnny Salda, 2015-11-28 Johnny Salda's unique and invaluable manual demystifies the qualitative coding process with a comprehensive assessment of different coding types, examples, and exercises. The ideal reference for students, teachers, and practitioners of qualitative inquiry, it is essential reading across the social sciences and neatly guides you through the multiple approaches available for coding qualitative data. Its wide array of strategies, from the more straightforward to the more complex, is skillfully explained and carefully exemplified, providing a complete toolkit of codes and skills that can be applied to any research project. For each code, Salda provides information about the method's origin, gives a detailed description of the method, demonstrates its practical applications, and sets out a clearly illustrated example with analytic follow-up. Now with a companion website, the book is supported by SAGE journal articles showing coding being applied to real research, sample transcripts highlighting coding techniques, links to CAQDAS sites to introduce relevant software, practical student exercises, links to video and digital content. This international bestseller is an extremely usable, robust manual and is a must-have resource for qualitative researchers at all levels. Click here for a listing of Johnny Salda's upcoming workshops.

**The Bestseller Code** Jodie Archer, Matthew L. Jockers, 2016-09-20 When a story captures the imagination of millions, that's magic. Can you quantify magic? Archer and Jockers just may have done so. Sylvia Day, New York Times bestselling author. Ask most people about massive success in the world of fiction, and you'll typically hear that it's a game of hazy crystal balls. The sales figures of E.L. James or Dan Brown seem to be freakish, random occurrences in an unknowable market. But what if there were an algorithm that could reveal a secret DNA of bestsellers, regardless of their genre? What if it knew just from analyzing the words alone, not just why genre writers like John Grisham and Danielle Steel belong on the lists, but also that authors such as Junot Diaz, Jodi Picoult, and Donna Tartt had telltale signs of success all over their pages? Thanks to Jodie Archer and Matthew Jockers, the algorithm exists; the code has been cracked, and the results bring fresh new insights into how fiction works and why we read. *The Bestseller Code* offers a new theory for why *Fifty Shades of Grey* sold so well. It sheds light on the current craze for dark heroines. It reveals which themes tend to sell best. And all with fascinating supporting data taken from a five-year study of twenty thousand novels. Then there is the hunt for the one, the paradigmatic example of bestselling writing according to a computer's analysis of thousands of points of data. The result is surprising, a bit ironic, and delightfully unorthodox. This book explains groundbreaking text mining research in accessible terms and offers a new perspective on the New York Times bestseller list. It's a big idea book about the relationship between creativity and technology that will be provocative to anyone interested in how analytics have already transformed the worlds of finance, medicine, and sports. But at heart, it is a celebration of books for readers and writers, a compelling investigation into how successful writing works, and a fresh take on our intellectual and emotional response to stories.
