Kilpatrick, 2020-02 Lewin's Essential GENES now moving to its fourth edition is a text built for a one semester majors course in molecular biology or molecular genetics for junior and seniors It is a text with the same three core authors as the best selling Lewin's GENES XII **Genes IV** Benjamin Lewin, 1990 The fourth edition of a textbook which retains its predecessors purpose of explaining heredity in terms of molecular structures but makes more explicit a theme that was implicit in previous editions the stages that follow the direct conversion of genetic information into RNA and protein

products The book reflects the proposition that the role of molecular biology is to explain in molecular terms the entire series of events by which genotype is converted into phenotype Annotation copyrighted by Book News Inc Portland OR **Lewin's GENES X** Jocelyn E. has accumulated it is possible to address the crucial questions what is a gene how is it reproduced how is it expressed what controls its expression The book starts by considering the biochemical basis for heredity as seen through the structure of DNA Within its main body the discussion of transcription and its regulation have been integrated into a single section More can be said about processing of RNA in eukaryotes we are gaining a much keener impression of the flux of DNA in the genetic material manipulation of DNA in the genome is acquiring more power and a new final section takes the topics under discussion into the further realm of normal development during embryogenesis and abnormal development of cancer cells
