*Strategic Management of Technology and Innovation* Robert A. Burgelman, Clayton Christensen, Steven C. *The Competitive Advantage of Knowledge-Based Resources in the Semiconductor Industry* Russell W. Wright, 2021-12-12 First Published in 1997 Knowledge and knowledge based resources occupy critical positions in a company s value chain The theme of the book is that organizational distinctive competences are asymmetrical accumulations of knowledge based resources relative to a firm s competitors These accumulations of knowledge and capabilities enable and constrain a firm s ability to develop competences in specific areas such as new product development Knowledge and capabilities are sources of competitive advantage to the extent that they are non transferable and non imitable The imitability of knowledge based resources is a function of two conceptually distinct attributes tacitness and tangibility This book looks at how the evolution of industry knowledge influences new product strategies in successive product generations of the semiconductor industry This book also makes some basic distinctions among the types of organizational resources that tend to generate unusual economic returns

**Disruptive Innovation in Chinese and Indian Businesses** Peter Ping Li, 2013-03-12 With the rapid development of China and India as new economic powers in global competition an obvious question is whether these emerging economies are great opportunities or threats Whilst answers are bound to differ depending on one s perspective it is increasingly clear that more local firms especially

local entrepreneurs from these emerging economies will play a more critical role in global competition by becoming challengers to global incumbents. Indeed, the fact that the majority of their populations are at the bottom of the pyramid and thus cannot afford products designed for the developed markets has made these emerging economies fertile ground for developing and applying disruptive innovations. A novel mix of key attributes distinctive from those of established technologies or business models: disruptive innovations are typically inferior yet affordable and good enough products or services which originate in lower end market segments but later move up to compete with those provided by incumbent firms. This book sheds new light on disruptive innovations both from and for the bottom of the pyramid in China and India from the point of view of local entrepreneurs and international firms seeking to operate their businesses there. It covers both the theoretical and practical implications of disruptive innovation using conceptual frameworks alongside detailed case studies whilst also providing a comparison of conditions and strategic options in India and China. Further, unlike existing studies, this book focuses on the neglected perspective of local challengers as the primary players and in doing so reveals the extent to which the future landscape of global competition may be shaped by disruptive innovation as well as its capacity to make the world flatter and more sustainable. This unique book will be valuable to both scholars and practitioners interested in disruptive innovation and those working in the fields of Asian studies, international business, economics, and globalization.
