Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process *The Behaviour and Design of Steel Structures to EC3* is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries *The United States Catalog* Mary Burnham, Carol Hurd, 1928 ... **The Civil Engineer's Reference Book (formerly "pocketbook")** John Cresson Trautwine, 1937 **Technical Books** Pratt Institute.
