Abstract. Serbian American electrical engineer Nikola Tesla (1856-1943), wrote,

“Long ago he (mankind) recognized that all perceptible matter comes from a primary substance, of a tenuity beyond conception, filling all space, the Ākāśa or luminiferous ether, which is acted upon by the life-giving Prana or creative force, calling into existence, in never ending cycles, all things and phenomena. The primary substance, thrown into infinitesimal whirls of prodigious velocity, becomes gross matter; the force subsiding, the motion ceases and matter disappears, reverting to the primary substance.”

We will now investigate as to what exactly this was supposed to mean.

Perceptible Matter

I. The quote in the abstract is taken from an article entitled, *“Man’s Greatest Achievement”*, which was first written by Nikola Tesla in the year 1907 and finally published more than twenty years later in the Milwaukee Sentinel, [1]. It presents a picture of a fluid-like primary substance known as the *aether*, filling all of space, but which only becomes perceptible as *matter* when it is rendered into tiny whirlpools that are believed to possess extremely high angular speeds. No explanation is given as to how this happens, other than to state that it occurs due to the agency of a life-giving creative force. No distinction is made in principle as between the 118 elements of the periodic table which we associate with *ponderable matter*, and the much smaller molecular vortices that James Clerk Maxwell proposed in the year 1861 to fill all of space in order to account for electromagnetic phenomena, [2].

We are therefore left to consider three different degrees of perception. There is first of all the pure fluid itself, which although considered by men of old to be imperceptible, is surely that which can manifest itself as electric current, and which we all know can be very perceptible!

Secondly, we have Maxwell’s all-pervading sea of tiny molecular vortices that is involved in electromagnetic and optical phenomena. It is proposed that

The Worldwide List of Alternative Theories and Critics Jean de Climont,2020-11-01

This Worldwide List of Alternative Theories and Critics only available in English language includes scientists involved in scientific fields. The 2023 issue of this directory includes the scientists found in the Internet. The scientists of the directory are only those involved in physics, natural philosophy. The list includes 9700 names of scientists, doctors, or diploma engineers for more than 70%. Their position is shortly presented together with their proposed alternative theory when applicable. There are nearly 3500 authors of such theories, all amazingly very different from one another. The main categories of theories are presented in another book of Jean de Climent: **THE ALTERNATIVE THEORIES** **2004 the Best of the Magazine Markets** Marni McNiff, Susan Tierney, 2004 **Nanometric Functions of Bioenergy** Paulo N. Correa, Alexandra N. Correa, 2004. Could there be an intimate physical relationship between the molecular structure of DNA/RNA with its protein machinery and the nanometric structure of the energies deployed by biological systems? What are these energies? Do they always bear mass? Are they always affected to mass? And what is the nature of that intimate physical relationship? What defines a biological system? Do disorder and entropy always increase in parallel? Does negentropy have a physical sense? Is there an energetic specificity to the living, or is biological specificity merely and solely molecular? Are there submolecular specificities to the living? These insistent questions are fundamental problems of molecular and submolecular biology, which the present book, Volume One of the Foundations of Aetherometric Biophysics, addresses from an entirely novel perspective. The authors develop the aetherometric method and introduce the reader to its application in the nanometric domains of bioenergetic physics, biochemistry, systems theory, and molecular biology. What emerges is a very different view of Life and living systems than has been proposed by previous theories of Biology: be they stochastic, mechanistic, deterministic, or vitalistic, mystical, or animistic. Even the topic of the submolecular properties of water is explored anew, well beyond present-day nanochemical understanding. From the mass-free energy level to the submolecular, the molecular, and the cellular, *Nanometric Functions of Bioenergy* tracks the imprints of complex and subtle energies responsible for biological submolecular functions and the creation of structure on both micro and macro scales. Living systems may at last be analytically grasped in their functional complexity as systems capable of superimposing very different types and orders of energy, both electromagnetic and nonelectromagnetic, in polar regimes of assemblage, in short, as systems of superimposition, accumulation, and interconversion of energy.
