

## CYTOGENETICS

### CYTOGENETICS

- Field of genetics involving microscopic examination of chromosomes
- Tightly compacted chromosomes have distinctive shapes and number
- Giemsa staining - Chemical dye gives a distinctive banding pattern
- Karyotype - produces imaging

### THE BASICS OF GENETICS

#### CELLS AND CHROMOSOMES

- Every eukaryotic species has a characteristic number of chromosomes in each cell nucleus
- Somatic cells = non-reproductive
  - have two sets of chromosomes
  - $2n = 46$  - pancreas cells, muscle cells, etc...
- Gametes = reproductive cells: sperm and eggs
  - have half as many chromosomes as somatic cells
  - $n=23$
- Eukaryotic chromosomes consist of chromatin
- Chromatin - a complex of DNA and protein that condenses during cell division

#### CELLULAR ORGANIZATION OF THE GENETIC MATERIAL

- Most cell division results in daughter cells with identical genetic information, DNA
- Non-identical daughter cells = gametes: sperm/egg cells
- All the DNA in a cell constitutes the cell's genome
- A genome:
  - = a single DNA molecule
  - (common in prokaryotic cells)
  - = a number of DNA molecules
  - (common in eukaryotic cells)
- DNA molecules in a cell are packaged into chromosomes

### DISTRIBUTION OF CHROMOSOMES DURING EUKARYOTIC CELL DIVISION

In preparation for cell division:

- DNA = replicated, chromosomes = condense
- Each duplicated including DNA chromosome has two sister chromatids, which separate during cell division

Centromere

- narrow "waist" of the duplicated chromosome
- where the two chromatids are most closely attached
- not visible

Chromosome

- Contains the genetic material (DNA)
- Contains proteins
- "packed" within cell's nucleus

TELOMERES:

telomerase, cell senescence, cancer, & pre-mature aging

- repetitive sequences of non-coding DNA (genome.gov)
- TTAGGG (THYMININE, THYMININE ADENINE GUANINE, GUANINE, GUANINE)
- specific DNA-protein structures found at both ends of each chromosome protecting a genome from nucleolytic degradation, unnecessary recombination, repair, and intrachromosomal fusion
- Located at the both tip of the chromosome

TELOMERES AND CELLULAR SENESCENCE

normal, dividing cell

- approximately 30 to 50 times without apoptosis involved

repeated cell replication and division is possible

- DNA sequence loss
- cell replication stopped

When young mas makapal pa yung telomerase kasi habangtumatanda mas numinipis kasi sa DNA replication.

- Neurons does not divide
- Stratified tissues are fast in cell division.

REPLICATION AND TELOMERES

- Once the telomeres is absent form a chromosome the person maybe prone to cancer mutations.

Telomerase- enzyme

**Cytogenetics** J. Schulz-Schaeffer, 2012-12-06 Since 1961 the author has taught a course in Cytogenetics at Montana State University Undergraduate and graduate students of Biology Chemistry Microbiology Animal and Range Science Plant and Soil Science Plant Pathology and Veterinary Science are enrolled Therefore the subject matter has been presented in an integrated way to correlate it with these diverse disciplines This book has been prepared as a text for this course The most recent Cytogenetics text was published in 1972 and rapidly developing research in this field makes a new one urgently needed This book includes many aspects of Cytogenetics and related fields and is written for the college student as well as for the researcher It is recommended that the student should have taken preparatory courses in Principles of Genetics and Cytology The content is more than is usually taught during one quarter of an academic year thus allowing an instructor to choose what he or she would like to present to a class This approach also allows the researcher to obtain a broad exposure to this field of biology References are generously supplied to stimulate original reading on the subject and to give access to valuable sources The detailed index is intended to be of special assistance to researchers

*Medical Cytogenetics* Hon Fong L. Mark, 2000-04-11 The only monograph on cytogenetics for the pathologist this up to the minute reference text contains the most up to date research findings on many important topics in medical genetics notably FISH fluorescent in situ hybridization based molecular cytogenetic technologies and spectral karyotyping An excellent resource for cytogeneticists prepar

Glossary of Genetics and Cytogenetics R. Rieger, A. Michaelis, M.M. Green, 2012-12-06 In preparing the new completely revised edition of this glossary which in the meantime has been translated into Russian and Polish we have attempted to include the most important new terms and to revise the text in those cases where new data demanded it As a result about fifty percent of the text is completely rewritten Once more we have tried to provide material suitable and usable both for students and research workers Accordingly depending upon our evaluation some terms have been simply defined others have been described at some length even to the extent of providing experimental data Wherever possible synonymy and redundancy have been pointed out and in the interest of historical accuracy the individual responsible for introducing a particular term or concept listed with the specific paper included in the literature citations Cross references between related terms are designated by an arrow before each relevant term To keep the book as far as possible to a reasonable size the terms carried over from the earlier edition have once more been critically selected and where necessary revised In spite of these efforts a certain increase in volume was unavoidable We hope that the new edition will once more prove useful to a wide audience and enjoy the same cordial reception as the earlier ones Comments and suggestions from the reviewers and users of the earlier editions have contributed significantly to the revision

Cancer Cytogenetics Sverre Heim, Felix Mitelman, 2015-06-29 The first three editions of this acclaimed book presented a much needed conceptual synthesis of this rapidly moving field Now Cancer Cytogenetics Fourth Edition offers a comprehensive expanded and up to date review of

recent dramatic advances in this area incorporating a vast amount of new data from the latest basic and clinical investigations New contributors reflecting broader international authorship and even greater expertise Greater emphasis throughout on the clinical importance and application of information about cytogenetic and molecular aberrations Includes a complete coverage of chromosome aberrations in cancer based on an assessment of the 60 000 neoplasms cytogenetically investigated to date Now produced in full color for enhanced clarity Covers how molecular genetic data PCR based and sequencing information are collated with the cytogenetic data where pertinent Discusses how molecular cytogenetic data based on studies using FISH CGH SNP etc are fused with karyotyping data to enable an as comprehensive understanding of cancer cytogenetics as is currently possible

*Cytogenetics in Plant Breeding* J. Sybenga, 2012-12-06 An introductory discussion of basic chromosome structure and function precedes the main text on the application of cytogenetic approaches to the analysis of the manipulation of both the genetic make up and the genetic transmission system of plant breeding material Analysis using light and electron microscopy segregations and molecular techniques yields information for assessing the material before and after manipulation Much attention is given to quantitative methods Manipulation not only involves the construction of specific genotypes but also chromosomal transmission systems Although analysis and manipulation in the somatic cycle are considered the focus is on the generative cycle with emphasis on analysis and subsequent segregation of specifically constructed material The book is intended for plant breeders and other scientists interested in the analysis and manipulation of breeding material at the chromosomal level Comparisons with molecular and cell biological approaches are made and the potential of the various methods is evaluated

FUNDAMENTALS OF CYTOGENETICS AND GENETICS, FIFTH EDITION Mahabal Ram, 2010-09 Provides thorough understanding of the principles and applications of cytogenetics and genetics in an easy to understand style The text is divided into Four parts Part I on Principles of Cytogenetics deals with evolution and structure of cell cell division and change and structure of genetic material Part II on Principles of Genetics provides detailed discussions on transmission distribution and arrangement of genetic material and evolution of species Part III which is on Molecular Genetics discusses functions of genetic material including biotechnology and genetic engineering and the last Part IV on Quantitative Genetics deliberates on the course of genetic material in populations A historical approach to the subject has also been presented to show the continuity and progress Back cover
