Chemical and Cellular Architecture Abel Lajtha, 2013-04-18 After the completion of the first edition of this series this editor thought that a new edition would not be warranted in less than 15 perhaps 20 years but it seems that we live in a time in which rapid changes are the norm and findings in a field such as neurochemistry develop exponentially The task of a future editor attempting to get a comprehensive neurochemical handbook for the year 2000 would be even less enviable but by then information processing may be very different The approach the design and the areas covered by each volume and each chapter are necessarily arbitrary and it is likely that other editors or authors would have approached the coverage or the organization in a different manner It is hoped however that readers will find the series helpful for beginning or for continuing work There may be some overlap among the various chapters but insisting on single coverage of an area would at times have restricted treatment to only one point of view and might have truncated and hurt the logical flow of some of the chapters *Annual Review of Biochemistry* Charles C. Richardson, 1995-06 *Cumulated Index Medicus*, 1984

NINCDS Monograph, 1976 **Axoplasmic Transport** Zafar Iqbal, 2018-05-04 Axoplasmic transport is the intracellular movement of cellular components required for the maintenance and normal physiological functioning of neuronal cells This book provides an up to date reference for both established investigators as well as for those entering in the field This volume describes the history and methods of the study of transport and the involvement of energy ions calmodulin microtubules and other cellular components in transport It also discusses the transport of polypeptides lipids nucleic acids neurotransmitter

containing components and various other particles in nerve fibres A significant portion of this book is devoted to axoplasmic transport regeneration and the relevance of transport in neurotropic functions are described in the first four chapters followed by a discussion on the mechanism of axoplasmic transport **Comprehensive Biochemistry** Marcel Florkin, Elmer Henry Stotz, 1986
