Learning by Effective Utilization of Technologies Riichiro Mizoguchi, Pierre Dillenbourg, Zhiting Zhu, 2006 Based on the theme of the use of computers for supporting collaborative learning this book includes contributions that aim to bridge both research tracks the one focusing on interactions and the other on contents the pedagogical use of digital portfolios both for promoting individual reflections and for scaffolding group interactions

Learning Java with Games Chong-wei Xu, 2018-11-16 This innovative approach to teaching Java language and programming uses game design development as the method to applying concepts Instead of teaching game design using Java projects are designed to teach Java in a problem solving approach that is both a fun and effective Learning Java with Games introduces the concepts of Java and coding then uses a project to emphasize those ideas It does not treat the object oriented and procedure and loop parts of Java as two separate entities to be covered separately but interweaves the two concepts so the students get a better picture of what Java is After studying a rich set of projects the book turns to build up a Three layer Structure for Games as an architecture template and a guiding line for designing and developing video games The proposed three layer architecture not only merges essential Java object oriented features but also addresses loosely coupled software architecture

Inference and Learning from Data: Volume 2 Ali H. Sayed, 2022-12-22 This extraordinary three volume work written in an engaging and rigorous style by a world authority in the field provides an accessible comprehensive introduction to the full spectrum of mathematical and statistical techniques underpinning contemporary methods in data driven learning and inference This second volume Inference builds on the foundational topics established in volume I to introduce students to techniques for inferring unknown variables and quantities including Bayesian inference Monte Carlo Markov Chain methods maximum likelihood estimation hidden Markov models Bayesian networks and reinforcement learning A consistent structure and pedagogy is employed throughout this volume to reinforce student understanding with over 350 end of chapter problems including solutions for instructors 180 solved examples almost 200 figures datasets and downloadable Matlab code Supported by sister volumes Foundations and Learning and unique in its scale and depth this textbook sequence is ideal for early career researchers and graduate students across many courses in signal processing machine learning statistical analysis data science and inference

Internet technologies in terms of enhancing the teaching and learning experience. It shares similar properties of other e-services. The development of E-Learning has subsequently led to a new way of learning. E-Learning is naturally suited to distance learning, flexible learning. As a consequence of E-Learning having to depend on the Internet or especially via web applications, the E-Learning environment has also become affected by security threats. With this inconsideration, this paper aims to explore how to develop a simple object-oriented model of E-Learning system for E-Education, give some primary security to protect its contents. The most of E-Learning system was developed the program according to the process-oriented method by CGI, but after developing this method is difficult to reuse, maintain, repair. In this paper, to develop an efficient design, we use object-oriented modeling UML 6 modeling. In this ever-changing world of object-oriented development, it has been getting harder, harder to develop, manage high-quality applications in a reasonable amount of time. UML is the information technology industry's version of a blueprint. It is a method for describing the systems architecture in detail.

Unified Software Engineering with Java Georges Gauthier Merx, Ronald J. Norman, 2007. Unified Software Engineering with Java is ideal for courses in introductory software engineering, Java programming, Java software engineering, and software development methodology with Java offered in departments of computer science, computer and information sciences, software engineering, information systems, and information technology. Today's programmers need more than just programming prowess; they need to understand object-oriented design, software quality assurance, and software project management. This unique text teaches the fundamentals of Java programming in the context of object-oriented software engineering and a Unified Process-based software development methodology. Written with the understanding that the introduction to software engineering and Java can be daunting, this text uses illustrative examples and real-life applications to make learning easier.
