

Cooking Techniques

Spacing

Individual foods, such as baked potatoes, cupcakes and appetizers, will cook more evenly if placed in the oven equal distances apart. When possible, arrange foods in a circular pattern.

Covering

As with conventional cooking, moisture evaporates during microwave cooking. Casserole lids or plastic wrap are used for a tighter seal. When using plastic wrap, vent the plastic wrap by folding back part of the plastic wrap from the edge of the dish to allow steam to escape. Loosen or remove plastic wrap as recipe directs for stand time. When removing plastic wrap covers, as well as any glass lids, be careful to remove them away from you to avoid steam burns. Various degrees of moisture retention are also obtained by using wax paper or paper towels. However, unless specified, a recipe is cooked covered.

Shielding

Thin areas of meat and poultry cook more quickly than meaty portions. To prevent overcooking, these thin areas can be shielded with strips of aluminum foil. Wooden toothpicks may be used to hold the foil in place.

Timing

A range in cooking time is given in each recipe. The time range compensates for the uncontrollable differences in food shapes, starting temperature and regional preferences. Always cook food for the minimum cooking time given in a recipe and check for doneness. If the food is undercooked, continue cooking. It is easier to add time to an undercooked product. Once the food is overcooked, nothing can be done.

Stirring

Stirring is usually necessary during microwave cooking. We have noted when stirring is helpful, using the words once, twice, frequently or occasionally to describe the amount of stirring necessary. Always bring the cooked outside edges toward the center and the less cooked center portions toward the outside of the dish.

Rearranging

Rearrange small items such as chicken pieces, shrimp, hamburger patties or pork chops. Rearrange pieces from the edge to the center and pieces from the center to the edge of the dish.

Turning

It is not possible to stir some foods to redistribute the heat. At times, microwave energy will concentrate in one area of a food. To help insure even cooking, these foods need to be turned. Turn over large foods, such as roasts or turkeys, halfway through cooking.

Stand Time

Most foods will continue to cook by conduction after the microwave oven is turned off. In meat cookery, the internal temperature will rise 5°F to 15°F (3°C to 8°C), if allowed to stand, tented with foil, for 10 to 15 minutes. Casseroles and vegetables need a shorter amount of standing time, but this standing time is necessary to allow foods to complete cooking to the center without overcooking on the edges.

Testing for Doneness

The same tests for doneness used in conventional cooking may be used for microwave cooking. Meat is done when fork-tender or splits at fibers. Chicken is done when juices are clear yellow and drumstick moves freely. Fish is done when it flakes and is opaque. Cake is done when a toothpick or cake tester is inserted and comes out clean. Candy is done when it reaches the proper temperature for each stage of crystallization.

An authoritative text presenting the growing evidence base for Mobilisation with Movement techniques. Developed over the past 26 years, Mobilisation with Movement (MWM) remains a relatively new form of manual therapy. It is however becoming one of the most popular approaches for the management of musculoskeletal disorders. Mobilisation with Movement: The art and the science introduces the concept of Mobilisation with Movement, describes basic Mobilisation with Movement techniques, and outlines its principles of application. The book summarises the emergent evidence base underpinning Mobilisation with Movement techniques, including randomised controlled trials, and shows how far the technique has progressed since first introduced by New Zealand physiotherapist Brian Mulligan in 1984. This easy-to-use manual therapy textbook is an excellent reference for the clinician, teacher, student, and researcher, and is intended to provide a nexus between the technique's seemingly successful clinical approach and its science base. A series of case studies brings the practical art of Mobilisation with Movement to life, while highlighting the underlying clinical reasoning and applied evidence base. A systematic review of the evidence for the technique's efficacy, a review of the current state of Mulligan's positional fault hypothesis, a new model of the mechanisms by which Mobilisation with Movement works, demonstrates the

clinical application of Mobilisation with Movement through twelve cases by leading practitioners more advanced aspects of the clinical application are developed and critiqued including guidelines on dosage and troubleshooting options the accompanying DVD demonstrates techniques from the text and features Brian Mulligan
