Mexico Mathematics Contest Problem Book Liong-shin Hahn, 2005 The New Mexico Mathematics Contest for high school students has been held annually since 1966 Each November thousands of middle and high school students from all over New Mexico converge to battle with elementary but tricky math problems The 200 highest scoring students meet for the second round the following February at the University of New Mexico in Albuquerque where they listen to a prominent mathematician give a keynote lecture have lunch and then get down to round two an even more challenging set of mathematical mind twisters Liong shin Hahn was charged with the task of creating a new set of problems each year for the New Mexico Mathematics Contest 1990 1999 In this volume Hahn has collected the 138 best problems to appear in these contests over the last decades They range from the simple to the highly challenging none are trivial The solutions contain many clever analyses and often display uncommon ingenuity His questions are always interesting and relevant to teenage contestants Young people training for competitions will not only learn a great deal of useful mathematics from this book but and this is much more important they will take a step toward learning to love mathematics

Competitive Math for Middle School Vinod Krishnamoorthy, 2018-04-09 The 39 self contained sections in this book present worked out examples as well as many sample problems categorized by the level of difficulty as Bronze Silver and Gold in order to help the readers gauge their progress and learning Detailed solutions to all problems in each section are provided at the end of each chapter The book can be used not only as a text but also for self study The text covers algebra solving single equations and systems of equations of varying degrees algebraic manipulations for creative problem solving inequalities basic set theory sequences and series rates and proportions unit analysis and percentages probability counting techniques introductory probability theory more set theory permutations and combinations expected value and symmetry and number theory prime factorizations and their applications Diophantine equations number bases modular arithmetic and divisibility It focuses on guiding students through creative problem solving and on teaching them to apply their knowledge in a wide variety of scenarios rather than rote memorization of mathematical facts It is aimed at but not limited to high performing middle school students and goes further in depth and teaches new concepts not otherwise taught in traditional public schools

The William Lowell Putnam Mathematical Competition 1985-2000: Problems, Solutions, and Commentary Kiran S. Kedlaya, Bjorn Poonen, Ravi Vakil, 2020-01-16 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes The authors highlight connections to other problems to the curriculum and to more advanced topics The best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates The solutions have been compiled from the American Mathematical Monthly Mathematics Magazine and past competitors Multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand In addition the book contains suggestions for further reading a hint to each problem separate from the full

solution and background information about the competition The book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics
