Paradigm Based on Complexity Science Jay Xiong,2011-02-14 This book describes a complete revolution in software  
engineering based on complexity science through the establishment of NSE Nonlinear Software Engineering paradigm which  
complies with the essential principles of complexity science including the Nonlinearity principle the Holism principle the  
Complexity Arises From Simple Rules principle the Initial Condition Sensitivity principle the Sensitivity to Change principle  
the Dynamics principle the Openness principle the Self organization principle and the Self adaptation principle The aims of  
this book are to offer revolutionary solutions to solve the critical problems existing with the old established software  
engineering paradigm based on linear thinking and simplistic science complied with the superposition principle and make it  
possible to help software development organizations double their productivity halve their cost and remove 99% to 99.99% of  
the defects in their software products and efficiently handle software complexity conformity visibility and changeability It  
covers almost all areas in software engineering The tools NSE\_CLICK an automatic acceptance testing platform for

outsourcing or internally developed C C products and NSE\_CLICK\_J an automatic acceptance testing platform for outsourcing or internally developed Java products are particularly designed for non technical readers to view review how the acceptance testing of a software product developed with NSE can be performed automatically and how the product developed with NSE is truly maintainable at the customer site
