[The Art and Science of Demand and Supply Chain Planning in Today's Complex Global Economy](#) Paul Myerson, 2023-02-24 The demand and supply chain planning process for manufacturers distributors and retailers has evolved over the years It has gone from a disjointed unconnected slow inaccurate fairly manual set of processes to an integrated timely process enabled by the use and coordination of highly trained people lean agile processes and cutting edge technology To make this set of processes work effectively one has to fully understand and appreciate that there is an art and science aspect to the process which can take years of education and experience to fully understand Essentially this book will offer the reader a chance to fully understand the interconnected set of processes in a best practice application Furthermore examples and cases will be used to illustrate its practical application in today s complex global supply chain In addition readers will understand and be able to apply and articulate the concepts tools and techniques used in the efficient supply of goods and services in today s changing global economy It will help them to learn how businesses through their supply chain work both internally and with their trading partners both upstream and downstream to build strong relationships and integrate demand and supply planning activities across the supply chain to deliver customer value efficiently and effectively They will learn about the tools and technologies enabling integration and the critical drivers and key metrics of supply chain performance

Human-AI Collaboration in Production Management Carl René Sauer, 2026-02-21 The advent of artificial intelligence AI and machine learning ML has significantly transformed production management in industrial manufacturing by enabling data driven decision making While human decision making is valued for its adaptability and contextual understanding AI driven systems offer the advantage of faster data driven decisions The concept of hybrid intelligence combines these two poles by utilizing the potential of AI without neglecting the necessary integration of human expertise However a structured method for determining the appropriate degree of automation defining the division of tasks between humans and AI for each decision is still lacking Thus this thesis

develops a framework to determine the optimal level of Human AI collaboration for production management use cases This framework enables organizations to leverage AI effectively across various scenarios complementing human expertise to enhance operational efficiency and decision making processes By offering a systematic method the framework helps avoid suboptimal AI ML deployments and supports organizations in harnessing hybrid intelligence for innovative and future ready production management
