database without understanding SQL tuning Oracle is a SQL processing engine and the execution speed of any SQL query is
influenced by many factors both internal and external As a declarative data access method SQL relies on the Oracle cost
based optimizer to always choose the best execution plan for every SQL query However Oracle s SQL is among the most
flexible and robust in the world and along with this great power comes complexity Tuning Oracle SQL is the single most
important skill of any Oracle professional and Oracle professionals are challenged to create SQL statements that will support

SQL Tuning Pocket Reference** Mark Gurry,2002-01-01 One of the most important challenges faced by Oracle database

administrators and Oracle developers is the need to tune SQL statements so that they execute efficiently. Poorly tuned SQL statements are one of the leading causes of substandard database performance and poor response time. SQL statements that perform poorly result in frustration for users and can even prevent a company from serving its customers in a timely manner. In this book, Mark Gurry shares his in-depth knowledge of Oracle's SQL statement optimizers. Mark's knowledge is the result of many hard-fought tuning battles during his many years of providing Oracle tuning services to clients. Mark provides insights into the workings of the rule-based optimizer that go well beyond what the rules tell you. Mark also provides solutions to many common problems that occur with both the rule-based and cost-based optimizers. In addition to the specific problem solution scenarios for the optimizers, Mark provides a number of handy SQL tuning tips. He discusses the various optimizer hints, telling you when they can be used to good effect. Finally, Mark discusses the use of the DBMS_STATS package to manage database statistics and the use of outlines to specify execution plans for SQL statements in third-party applications that you can't otherwise modify.
