Dowd, 2015-06-26 Excerpt from *Tool Engineering Jigs and Fixtures* The aim and purpose of this book is to furnish information with respect to the science of tool engineering Nothing has previously been published on the subject except in short articles dealing with specific examples of jigs and fixtures Information of value regarding principles of design in connection with production tools is sadly lacking and mechanical literature contains only spasmodic efforts to remedy the deficiency In order to cover the subject properly three volumes were planned each of these being complete in itself This volume which is the first deals with the design of jigs and fixtures It covers the important points connected with the design shows the reasons why certain methods are better than others takes up principles and their application to design and gives many graphic examples which illustrate the use of the principles involved An endeavor has been made to simplify the subject matter as far as possible and to treat it in a practical common sense manner which can be easily understood by the designer A careful study of the illustrations and descriptive matter will enable a progressive man to understand both the theory and practice necessary for this line of work The second volume takes up turret lathe and vertical boring mill tooling together with grinding fixtures The third volume deals with punches dies and gages For a number of years the machines and tools used for production have been undergoing a process of evolution and although the development work has progressed rapidly much still remains to be done Present manufacturing methods are of the highest order and tooling for high production is of interest to all the mechanical fraternity There are however comparatively few men in this country who really know the science in all its fundamentals and for this reason the tooling in many factories is probably not over 50% efficient A great many of those responsible for tooling are not well informed as to the fundamentals of design Tools are worked out more or less by using ideas in vogue in the

factory where the work is being done and the design is usually influenced by previous practice for work of the same character About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
