THOUGHTWORKS AGILE MATURITY

Level / Practice	Build management and continuous integration	Environments and deployment	Release management and compliance	Testing	Data management
Level 3 – Optimizing: Focus on process improvement	Regular meetings to discuss integration issues addressed by automation, faster feedback, and visibility.	Environments are effectively managed. Provisioning fully automated. Virtualization use if applicable.	Operations and development teams regularly collaborate to manage risk and reduce cycle times.	Rare production rollbacks. Defects are found and fixed immediately.	Release to release feedback of database performance and deployment process.
Level 2 - Quantitatively managed: Process measured and controlled	Build metrics are collected, visible, and acted on. Builds are not left broken.	Orchestrated deployment managed. Versions and rollback process are tested.	Environment and applications health monitored and proactively managed. Monitored cycle time.	Quality metrics and trends tracked. Non-functional requirements are defined and measured.	Database upgrades and rollbacks tested with each deployment. Database performance is monitored and optimized.
Level 1 – Consistent: Automated processes applied across the whole application lifecycle	Automatic build and test cycle every time a change is committed. Dependencies are managed. Re-use of scripts and tools.	Fully automated push-button deployment process. The same deployment process to all environments.	Change management and approval process defined and applied. Regulator and compliance conditions met.	Automated unit and acceptance tests. Testing is part of the development process.	Database changes are made automatically as part of the deployment process.
Level 0 – Repeatable: Process documented and partly automated	Regular automatic build and testing. Any build can be recreated from version control using an automated process.	Automated deployment for some environments. Creating new environments is inexpensive. All configurations are versioned.	Painful and infrequent, but reliable releases. Limited traceability from requirements to release.	Automated tests are written as part of the story development.	Changes in the database are made by automated scripts, versioned with the application.
Level -1 – Regressive: Processes unrepeatable, poorly controlled, and reactive	Manual processes for building software. No management of artifacts and reports.	Manual process for software deployment. Environment-specific binaries. Environments provisioned manually.	Infrequent and unreliable releases.	Manual testing after development.	Data migration unversioned and performed manually.

Many organizations start high speed high change projects without knowing how to do them and even worse without knowing they don't know. Successful completion of these projects is often at the expense of the project team. Adaptive Software Development emphasizes an adaptive collaborative approach to software development. The concepts allow developers to scale up rapid application development and extreme programming approaches for use on larger more complex projects. The four goals of the book are to support an adaptive culture or mindset in which change and uncertainty are assumed to be the natural state, not a false expectation of order; introduce frameworks to guide the iterative process of managing change; institute collaboration, the interaction of people on three levels: interpersonal, cultural, and structural; add rigor and discipline to the RAD approach, making it scalable to the uncertainty and complexity of real life undertakings. **Extreme Programming and Agile Methods - XP/Agile Universe 2004** Carmen Zannier, Hakan Erdogmus, Lowell Lindstrom, 2004-11-29

It was 1999 when *Extreme Programming Explained* was first published, making this year's event arguably the fifth anniversary of the birth of the XP/Agile movement in software development. Our fourth conference reflected the evolution and the learning that have occurred in these exciting five years as agile practices have become part of the mainstream in software development. These pages are the proceedings of XP/Agile Universe 2004, held in beautiful Calgary, gateway to the Canadian Rockies in Alberta, Canada. Evident in the conference is the fact that our learning is still in its early stages. While at times overlooked, adaptation has been a core principle of agile software development since the earliest literature on the subject. The conference and these proceedings reinforce that principle. Although some organizations are able to practice agile methods in the near pure form, most are not reflecting just how radically innovative these methods are to this day. Any innovation must coexist with an existing environment, and agile software development is no different. There are numerous challenges confronting IT and software development organizations today, with many solutions pitched by a cadre of advocates. Be it CMM, offshoring, outsourcing, security, or one of many other current topics in the industry, teams using or transitioning to Extreme Programming and other agile practices must integrate with the rest of the organization in order to succeed. The papers here offer some of the latest experiences that teams are having in those efforts. XP/Agile Universe 2004 consisted of workshops, tutorials, papers, panels, the Open Space session, the Educators Symposium, keynotes, educational games, and industry presentations. Adaptive Leadership Jim Highsmith, 2013-11-01. Lessons from Agile's First Decade, Leadership for Agile's Next Decade. The agile software movement has now been around for a full decade. As coauthor of the original Agile Manifesto, Jim Highsmith has been at its heart since the beginning. He's spent the past decade helping hundreds of organizations transition to agile/lean. When it comes to agile, he's seen it all in a variety of industries worldwide. Now in *Adaptive Leadership*, he has compiled, updated, and extended his best writings about agile and lean methods for a management audience. Highsmith doesn't just reveal what's working and what isn't; he offers a powerful new vision for extending agility across the enterprise. Drawing on what's been learned in application development, this guide shows how to

use adaptive leadership techniques to transform the way you deliver complete solutions whatever form they take You'll learn how enterprise agility can enable the ambitious organizational missions that matter most how leaders can deliver a continuous stream of value how to think disruptively about opportunities and how to respond quickly by creating more adaptive innovative organizations Coverage includes Discovering and executing new business opportunities far more quickly Delivering complete business solutions earlier and iterating them more often Organizing for innovation and systematically managing opportunity flow Clarifying the degree of strategic portfolio and operational agility you need and focusing on your highest value transformations Creating cultures that actually can adapt and learn Reinvigorating the roots of agile value and values Understanding IT's changing value proposition and retraining your people accordingly Integrating economics products and social responsibility Choosing metrics that guide agility not counterproductive traditional metrics Understanding the financial implications of technical debt Optimizing business value by doing less and guiding the process with NOT to do lists Speculating intelligently when you can't plan away uncertainty Customizing management to each project's needs because not all projects should be equally agile

Extreme Programming and Agile Methods - XP/Agile Universe 2002 Don Wells, Lauris Williams, 2003-08-02 The second XP Universe and first Agile Universe brought together many people interested in building software in a new way Held in Chicago August 4-7 2002 it attracted software experts educators and developers Unlike most conferences the venue was very dynamic Many activities were not even well defined in advance All discussions were encouraged to be spontaneous Even so there were some written words available and you are holding all of them now We have collected as much material as possible together into this small volume It is just the tip of the iceberg of course A reminder to us of what we learned the people we met and the ideas we expressed The conference papers including research and experience papers are reproduced in these proceedings Forty one 41 papers were submitted Each submitted paper received three reviews by program committee members The program committee consisted of 40 members Papers submitted by program committee members were refereed separately This ensured that reviewers could provide an honest feedback not seen by the paper submitters In many cases the program committee shepherded authors to significantly improve their initial submission prior to completing the version contained in these proceedings In the end the program committee chose 25 papers for publication 60% acceptance
