

Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of cooling and Power Professionals at Design/Manufacturing stages. I also used several other sources for additional material, such as Part II course book at Cambridge on Cooling Theory and Thermodynamic gas in Professor John White, and the gas cycle notes from a Cambridge book on Subsonic/Transonic/Supersonic intake gases by Professor Eric Goebel. I also included some more recent literature (2023 course, Applied Maths for the Power Professionals, 2024) and writing of the notes is based on my former course notes, "Thrust Based Cooling".

All credits go to those who did my best!
