processing and new optimization techniques      Logical and Relational Learning Luc De Raedt, 2008-09-27  
The term logical and relational learning refers to the subfield of artificial intelligence  
machine learning and data mining that is concerned with learning in expressive logical or relational representations. It is the union  
of inductive logic programming, statistical relational learning, and multi-relational data mining, which all have contributed  
techniques for learning from data in relational form. Even though some early contributions to logical and relational learning  
are about forty years old, now it was only with the advent of deductive logic programming in the early 1990s that the field  
became popular. Whereas initial work was often concerned with logical or logic programming issues,  
the focus has rapidly changed to the discovery of new and interpretable knowledge from structured data, often in the form of rules,  
and soon important successes in applications in domains such as bioinformatics and computational linguistics were  
realized. Today the challenges and opportunities of dealing with structured data and knowledge have been taken up by the artificial  
intelligence community at large and form the motivation for a lot of ongoing research. Indeed, graph network and multi-  
relational data mining are now popular themes in data mining, and statistical relational learning is receiving a lot of attention  
in the machine learning and uncertainty in artificial intelligence communities. In addition, the range of tasks for which logical  
and relational techniques have been developed now covers almost all machine learning and data mining tasks.      AI and  
Computing in Industrial Education Handbook Marcelo V. Garcia, Rommel Santiago Velastegui Hernández, 2025-10-24  
This book bridges Industry 4.0 principles with educational innovation, offering groundbreaking approaches that transform learning  
environments across diverse contexts. Readers discover practical applications ranging from AI-powered diagnostics to  
gamification strategies, all designed to make education more accessible, engaging, and effective. The unique collaboration  
between Hispanic American and European researchers brings fresh perspectives to educational technology, organizing  
cutting-edge research into six comprehensive sections. What distinguishes this work is its human-centered approach: each  
technological advancement connects directly to pedagogical improvement. Educators, researchers, and technology specialists  
find value in the book's exploration of solutions like holographic displays, 3D printed prosthetics for STEM education, and  
psychological self-assessment platforms. Beyond serving as a reference, this book establishes a foundation for continued cross-  
cultural dialogue and future innovation, helping institutions integrate emerging technologies while keeping human  
development at the core of educational transformation.      Machine Learning: ECML 2004 Jean-Francois  
Boulicaut, 2004-09-07  
This book constitutes the refereed proceedings of the 15th European Conference on Machine Learning  
ECML 2004 held in Pisa, Italy, in September 2004, jointly with PKDD 2004. The 45 revised full papers and 6 revised short  
papers presented together with abstracts of 5 invited talks were carefully reviewed and selected from 280 papers submitted  
to ECML and 107 papers submitted to both ECML and PKDD. The papers present a wealth of new results in the area and  
address all current issues in machine learning.      Broadband Policies for Latin America and the Caribbean: A Digital

Economy Toolkit OECD, Inter-American Development Bank, 2016-06-22 This joint initiative by the Inter American Development Bank IDB and the OECD seeks to encourage the expansion of broadband networks and services in the region supporting a coherent and cross sectorial approach to maximise their benefits for economic and social development
