Information Security Management Handbook, Fifth Edition Harold F. Tipton, Micki Krause, 2003-12-30 **Computer Organization and Design MIPS Edition** David A. Patterson, John L. Hennessy, 2013-09-30

Computer Organization and Design Fifth Edition is the latest update to the classic introduction to computer organization. The text now contains new examples and material highlighting the emergence of mobile computing and the cloud. It explores this generational change with updated content featuring tablet computers, cloud infrastructure, and the ARM mobile computing devices and x86 cloud computing architectures. The book uses a MIPS processor core to present the fundamentals of hardware technologies: assembly language, computer arithmetic, pipelining, memory hierarchies, and I/O. Because an understanding of modern hardware is essential to achieving good performance and energy efficiency, this edition adds a new concrete example, "Going Faster," used throughout the text to demonstrate extremely effective optimization techniques. There is also a new discussion of the Eight Great Ideas of computer architecture. Parallelism is examined in depth with examples and content highlighting parallel hardware and software topics. The book features the Intel Core i7, ARM Cortex A8, and NVIDIA Fermi GPU as real world examples, along with a full set of updated and improved exercises. This new edition is an ideal resource for professional digital system designers, programmers, application developers, and system software developers. It will also be of interest to undergraduate students in Computer Science, Computer Engineering, and Electrical Engineering courses in Computer Organization, Computer Design, ranging from Sophomore required courses to Senior Electives. Winner of a 2014 Texty Award from the Text and Academic Authors Association. Includes new examples, exercises, and material highlighting the emergence of mobile computing and the cloud. Covers parallelism in depth with examples and content highlighting parallel hardware and software topics. Features the Intel Core i7, ARM Cortex A8, and NVIDIA Fermi GPU as real world examples throughout the book. Adds a new concrete example, "Going Faster," to demonstrate how understanding hardware can inspire software optimizations that improve performance by 200 times. Discusses and highlights the Eight Great Ideas of computer architecture: Performance via Parallelism, Performance via Pipelining, Performance via Prediction, Design for Moore's Law, Hierarchy of Memories, Abstraction to Simplify Design, Make the Common Case Fast, and Dependability via Redundancy. Includes a full set of updated and improved exercises.

Circuits and Systems for the Internet of Things João Goes, 2022-09-01

Internet of Things (IoT) can be envisaged as a dynamic network of interconnected physical and virtual entities, things with their own identities and attributes, seamlessly integrated in order to e.g. actively participate in economic or societal processes, interact with services, and react autonomously to events while sensing the environment. By enabling things to connect and becoming recognizable while providing them with intelligence-informed and context-based decisions, are expected in a broad range of domains, spanning from health and elderly care to energy efficiency, either providing business competitive advantages to companies, either addressing key social concerns. The level of connectivity and analytical

intelligence provided by the IoT paradigm is expected to allow creating new services that would not be feasible by other means This CAS4IoT book targets post graduate students and design engineers with the skills to understand and design a broader range of analog digital and mixed signal circuits and systems in the field of IoT spanning from data converters for sensor interfaces to radios ensuring a good balance between academia and industry combined with a judicious selection of worldwide distinguished authors Solving competitive location problems via memetic algorithms. High performance computing approaches. Juana López Redondo,2009-02-19 La localización de servicios Facility location en inglés pretende encontrar el emplazamiento de uno o más centros servicios de modo que se optimice una determinada función objetivo Dicha función objetivo puede por ejemplo tratar de minimizar el coste de transporte proporcionar a los clientes un servicio de forma equitativa capturar la mayor cuota de mercado posible etc La localización de servicios abarca muchos campos como la investigación operativa la ingeniería industrial la geografía la economía las matemáticas el marketing el planning urbanístico además de otros muchos campos relacionados Existen muchos problemas de localización en la vida real como por ejemplo la localización de hospitales de colegios o vertederos por nombrar algunos Para ser capaces de obtener soluciones a los problemas de localización es necesario desarrollar diseñar un modelo que represente la realidad lo más fielmente posible Dichos modelos pueden llegar a ser realmente difíciles de tratar Muchos algoritmos de optimización global exactos y heurísticos han sido propuestos para resolver problemas de localización Los algoritmos exactos se caracterizan por ser capaces de obtener el óptimo global con una cierta precisión Sin embargo suelen ser altamente costosos desde el punto de vista computacional lo que implica que en determinados casos sea imposible aplicarlos para resolver un problema Los algoritmos heurísticos se alzan entonces como una buena alternativa No obstante en determinadas circunstancias los requerimientos computacionales son tan elevados que el uso de algoritmos heurísticos ejecutándose en procesadores estándares no es suficiente En tales situaciones la computación de altas prestaciones es necesaria Esta tesis Solving competitive location problems via memetic algorithms High performance computing approaches Algoritmos meméticos para problemas de localización competitiva Computación de altas prestaciones proporciona por un lado algoritmos heurísticos capaces de resolver problemas de localización tanto en el dominio continuo como en el discreto y por otro lado técnicas paralelas que permiten reducir el tiempo de ejecución resolver problemas más grandes e incluso en ocasiones mejorar la calidad de las soluciones Esta tesis incluye tres partes bien diferenciadas cada una de las cuales se divide en varios capítulos La primera parte Preliminaries Preliminares está compuesta por tres capítulos que revisan el estado actual de la optimización global de la computación de altas prestaciones y de la ciencia de la localización respectivamente El Capítulo 1 comienza con la definición de los problemas de optimización y continúa con la introducción de diferentes métodos heurísticos para tratar con ellos El Capítulo 2 describe brevemente algunas de las arquitecturas paralelas y de los modelos de programación paralelos Finalmente en el Capítulo 3 se describen y analizan los principales ingredientes de la localización de servicios y se presenta una revisión

sobre problemas de localización continuos y discretos La segunda parte de la tesis Solving continuous location problems Resolviendo problemas de localización continua comienza en el Capítulo 4 donde se presenta un problema de localización competitiva en el plano y se revisan dos técnicas previamente propuestas en la literatura para resolverlo Posteriormente se describe un nuevo algoritmo evolutivo para resolver óptimamente el problema llamado UEGO y se comparan todas las alternativas Finalmente varias estrategias paralelas basadas en el algoritmo UEGO son analizadas y evaluadas En el Capítulo 5 el problema de localizar un solo centro en el plano se extiende al caso en el que la cadena o empresa quiere emplazar más de un servicio Para abordar este problema se adapta el algoritmo UEGO presentado en el Capítulo 4 además de otras técnicas descritas en la literatura A través de un extenso estudio computacional todos los algoritmos son comparados y se concluye que UEGO es el mejor de todos ellos tanto por su eficiencia como por su efectividad UEGO es usado para realizar un estudio de sensibilidad con el fin de chequear los cambios de diseño localización óptima cuando los parámetros del modelo cambian Finalmente se presentan y evalúan varias técnicas paralelas para tratar el problema de localización de varios centros El Capítulo 6 está dedicado al problema de líder seguidor En dicho problema tras la localización del líder el competidor reacciona localizando otro nuevo centro en el lugar que maximice su propio beneficio El objetivo del líder es encontrar la solución que maximice su beneficio sabiendo que posteriormente la competencia localizará un nuevo centro Por tanto hay que resolver dos problemas simultáneamente el problema del seguidor también denominado medianoide y el problema del líder o centroide El modelo del problema del líder seguidor se describe al principio del capítulo Posteriormente se proponen y evalúan varios algoritmos para resolver tanto el problema del medianoide como el del centroide El capítulo finaliza con la paralelización de uno de los algoritmos propuestos La tercera parte de la tesis Solving discrete location problems Resolviendo problemas de localización discreta comienza en el Capítulo 7 con una introducción sobre algunos problemas de localización discreta Este capítulo analiza aquellos casos en los que dichos problemas podrán presentar varias soluciones óptimas Además se muestra cómo un usuario experimentado podrá obtenerlas y se establecen algunos criterios para seleccionar una solución óptima entre diferentes alternativas El capítulo finaliza con la descripción del algoritmo MSH un heurístico ampliamente usado en la literatura para la resolución de problemas de localización discreta El Capítulo 8 describe un algoritmo genético multimodal GASUB capaz de resolver varios problemas de localización discreta El algoritmo tiene diferentes parámetros de entrada que pueden ser ajustados para alcanzar diferentes metas En este capítulo el objetivo es obtener al menos una solución óptima pero invirtiendo el menor esfuerzo tiempo computacional posible Para tal fin se lleva a cabo un estudio previo y se determina el conjunto de parámetros adecuado GASUB con este conjunto de parámetros es comparado con el optimizador Xpress MP y con la heurística MSH los cuales son capaces de obtener un óptimo global de manera directa Sin embargo teniendo en cuenta que los problemas de localización discreta considerados en esta tesis pueden tener más de una solución óptima en el Capítulo 9 se analiza la posibilidad de explotar las propiedades multimodales de GASUB Con este fin se propone un nuevo conjunto de

par metros con el que GASUB es nuevamente evaluado Finalmente se da una paralelización de GASUB y se estudian algunas de las soluciones globales encontradas por los algoritmos La tesis finaliza con un resumen sobre los principales resultados obtenidos y sobre las líneas de investigación futura **VLSI Circuits and Systems**, 2005 Improving Parallelism and Data Locality with Affine Partitioning Amy Wingmui Lim, 2001 **Field-programmable Logic and Applications**, 1998
