Applied Survival Analysis David W. Hosmer, Jr., Stanley Lemeshow, 1999-01-21 A Practical Up To Date Guide To Modern Methods In The Analysis Of Time To Event Data The rapid proliferation of powerful and affordable statistical software packages over the past decade has inspired the development of an array of valuable new methods for analyzing survival time data Yet there continues to be a paucity of statistical modeling guides geared to the concerns of health related researchers who study time to event data This book helps bridge this important gap in the literature Applied Survival Analysis is a comprehensive introduction to regression modeling for time to event data used in epidemiological biostatistical and other health related research Unlike other texts on the subject it focuses almost exclusively on practical applications rather than mathematical theory and offers clear accessible presentations of modern modeling techniques supplemented with

real world examples and case studies While the authors emphasize the proportional hazards model descriptive methods and parametric models are also considered in some detail Key topics covered in depth include Variable selection Identification of the scale of continuous covariates The role of interactions in the model Interpretation of a fitted model Assessment of fit and model assumptions Regression diagnostics Recurrent event models frailty models and additive models Commercially available statistical software and getting the most out of it Applied Survival Analysis is an ideal introduction for graduate students in biostatistics and epidemiology as well as researchers in health related fields *Analysis of Health Surveys* Edward L. Korn, Barry I. Graubard, 1999-08-12 The authors clearly explain the theory and methods of survey analysis along with real world applications BOOK JACKET **Fractional Factorial Plans** Alok Dey, Rahul Mukerjee, 1999-03-25 A one stop reference to fractional factorials and related orthogonal arrays Presenting one of the most dynamic areas of statistical research this book offers a systematic rigorous and up to date treatment of fractional factorial designs and related combinatorial mathematics Leading statisticians Alok Dey and Rahul Mukerjee consolidate vast amounts of material from the professional literature expertly weaving fractional replication orthogonal arrays and optimality aspects They develop the basic theory of fractional factorials using the calculus of factorial arrangements thereby providing a unified approach to the study of fractional factorial plans An indispensable guide for statisticians in research and industry as well as for graduate students Fractional Factorial Plans features Construction procedures of symmetric and asymmetric orthogonal arrays Many up to date research results on nonexistence A chapter on optimal fractional factorials not based on orthogonal arrays Trend free plans minimum aberration plans and search and supersaturated designs Numerous examples and extensive references Cognition and Survey Research Monroe G. Sirken, 1999-04-21 Survey methods research an interdisciplinary approach Introducing the theory and tools of cognitive aspects of survey methodology CASM a movement that has greatly contributed to the evolving field of survey methods research this collection of monographs explores advances in the use of cognitive psychology and other sciences to improve the quality of data collected in surveys In 22 articles commissioned specifically for this volume leading survey researchers social scientists and statisticians from around the globe evaluate the advantages of interdisciplinary survey techniques focusing on the many contributions of the CASM movement and drawing on such disciplines as statistics cognitive psychology sociology behavioral sciences anthropology linguistics and computer sciences The authors explain basic concepts and methodologies and demonstrate the application of cognitive theory to all phases of survey research including data processing analysis presentation and administration They provide a critical review of the history and findings of CASM oriented research and describe useful cognitive models used in survey testing and design Also the authors discuss the expanding role of computer technologies and statistical advances in the interdisciplinary aspects of survey methods and draw a roadmap for interdisciplinary survey research into the twenty first century Clearly written and supplemented with extensive references and more than 80 figures and charts Cognition and Survey Research is an

Construction and Assessment of Classification Rules David J. Hand, 1997 Construction and Assessment of Classification Rules is an accessible book presenting the central issues and placing particular emphasis on comparison performance assessment and how to match method to application Some unusual allocation problems are outlined and a detailed discussion of performance assessment is included The methods used for different application domains such as parametric method smoothing methods and recursive partitioning are described The author reviews different approaches and guides researchers and users to suitable classes of techniques

Adaptive Sampling Steven K. Thompson, George A. F. Seber, 1996-06-07 Offering a viable solution to the long standing problem of estimating the abundance of rare clustered populations adaptive sampling designs are rapidly gaining prominence in the natural and social sciences as well as in other fields with inherently difficult sampling situations In marked contrast to conventional sampling designs in which the entire sample of units to be observed is fixed prior to the survey adaptive sampling strategies allow for increased sampling intensity depending upon observations made during the survey For example in a survey to assess the abundance of a rare animal species neighboring sites may be added to the sample whenever the species is encountered during the survey In an epidemiological survey of a contagious or genetically linked disease sampling intensity may be increased whenever prevalence of the disease is encountered Written by two acknowledged experts in this emerging field this book offers researchers their first comprehensive introduction to adaptive sampling An ideal reference for statisticians conducting research in survey designs and spatial statistics as well as researchers working in the environmental ecological public health and biomedical sciences Adaptive Sampling Provides a comprehensive fully integrated introduction to adaptive sampling theory and practice Describes recent research findings Introduces readers to a wide range of adaptive sampling strategies and techniques Includes numerous real world examples from environmental pollution studies surveys of rare animal and plant species studies of contagious diseases marketing surveys mineral and fossil fuel assessments and more
