[RAMAS Risk Calc 4.0 Software](#) Scott Ferson, 2002-07-24 Many analysts use point estimates and ignore their uncertainty. But we can never be sure about the exact values of numbers based on data. And no practical calculations are without error, even though they may have the appearance of precision. *RAMAS Risk Calc 4.0 Software: Risk Assessment with Uncertain Numbers* uses traditional methods such as probability theory and interval analysis and the newest techniques such as probability bounds analysis and fuzzy arithmetic to quantify uncertainty in risk assessments. It creates a convenient environment for computing in which all uncertainties are carried forward automatically. Providing examples in four major application areas, *Risk Calc* brings sophisticated methods of uncertainty analysis into the reach of anyone who can do arithmetic on a calculator.

Designing Groundwater Models with Windows William C. Walton, 1994-12-27 This book explains how to design a groundwater model using the accompanying customized *DesignMod* software. *DesignMod* does not require a digitizer but instead uses the mouse and rich graphical features of the Windows environment. It enables the user to draw and redraw easily and quickly cross sections and plan views with site base map information, contour, and zonation pattern overlays. Discretization, aggregation, averaging, and approximation guidelines for designing groundwater models with *DesignMod* are provided as a handy reference. *DesignMod* also can be used to manipulate and view model database array files. Many exercises with step-by-step program operation documentation are provided for beginning and intermediate modelers.
