Correlation Pattern Recognition:

Correlation Pattern Recognition B. V. K. Vijaya Kumar, Abhijit Mahalanobis, Richard D. Juday, 2005-11-24 Correlation is a robust and general technique for pattern recognition and is used in many applications such as automatic target recognition biometric recognition and optical character recognition The design analysis and use of correlation pattern recognition algorithms requires background information including linear systems theory random variables and processes matrix vector methods detection and estimation theory digital signal processing and optical processing This book provides a needed review of this diverse background material and develops the signal processing theory the pattern recognition metrics and the practical application know how from basic premises It shows both digital and optical implementations It also contains technology presented by the team that developed it and includes case studies of significant interest such as face and fingerprint recognition Suitable for graduate students taking courses in pattern recognition theory whilst reaching technical levels of interest to the professional practitioner

Weighted-area Correlation and Bidirectional Flow of Information in Pattern Recognition R. D Freeman (Jr), SYSTEM DEVELOPMENT CORP SANTA MONICA CALIF., 1963 This report describes an investigation of two problems in pattern recognition The first was to estimate empirically the error rate to be expected using weighted area correlation on single font uncontrolled typed characters A computer program used a learning procedure to create new templates based on those inputs it was unsure of A total of 650 inputs were used during which the error rate dropped by almost an order of magnitude to under 1% The second problem was to test the power of simple bidirectional flow of information in pattern recognition Even when weighted area correlation could not positively identify a sample it could reduce the ambiguity to a list of candidates This list was never over six out of a possible 26 and averaged between one and three An unsophisticated procedure which involved no learning was used to compare all pairs of elements on the candidate list in an attempt to eliminate one of the pair The results show the value of bidirectional flow of information Finally a more sophisticated system is described for recognizing typed letters and the form in which bidirectional flow of information was used in the study is considered in more general terms Author

Pattern Recognition Approach to Data Interpretation Diane Wolff,2012-12-06 An attempt is made in this book to give scientists a detailed working knowledge of the powerful mathematical tools available to aid in data interpretation especially when con fronted with large data sets incorporating many parameters A minimal amount of com puter knowledge is necessary for successful applications and we have tried conscien tiously to provide this in the appropriate sections and references Scientific data are now being produced at rates not believed possible ten years ago A major goal in any sci entific investigation should be to obtain a critical evaluation of the data generated in a set of experiments in order to extract whatever useful scientific information may be present Very often the large number of measurements present in the data set does not make this an easy task The goals of this book are thus fourfold The first is to create a useful reference on the applications of these statistical pattern recognition methods to the sciences The majority of our discussions center around the fields of chemistry geology environmen tal sciences physics and the biological and medical sciences In Chapter IV a section is devoted to each of these fields Since the applications of pattern recognition tech niques are essentially unlimited restricted only by the outer limitations of Eigen and Nonlinear Methods for Advanced Correlation Pattern Recognition Mohamed I. Advances in Biometrics N. K. Ratha,Venu Govindaraju,2007-10-06 Biometrics technology continues to stride forward with its wider acceptance and its perceived need in various new security facets of modern society Biometrics is being required to meet the growing challenges of identity management While biometrics finds use in all diverse applications the research challenges continue to grow as the user community expects a fully automatic system to cover the whole universal population with almost no errors Recent advances in biometrics include new developments in sensors modalities and algorithms As new sensors are designed newer challenges emerge in the algorithms for accurate recognition New modalities have been discovered in addition to the fusion of existing modalities to improve accuracy and wider coverage Written for researchers advanced students and practitioners to use as a handbook this volume captures the very latest state of the art research contributions from leading international researchers in the field *A NEUTRAL NETWORK MODEL OF HUMAN PATTERN RECOGNITION* Bruce Alan Whitehead,1978 Pattern Recognition, Inner Products and Correlation Filters ,1991 In this paper we review correlation filters as an approach to pattern recognition with a special emphasis on the consequences of normalizing the correlation to achieve intensity invariance Intensity invariance is effected using the Cauchy Schwarz inequality to normalize the correlation integral We discuss the implications of this criterion for the application of correlation filters to the pattern recognition problem It is shown that normalized phase only and synthetic discriminate functions do not provide the recognition discrimination obtained with the classical matched filter 34 refs 5 figs Pattern Recognition Employing Topology, Cross Correlation and Decision Theory Milton Jay Minneman,1966 **Pattern Recognition** Robert J. Schalkoff,1992 Explores the heart of pattern recognition concepts methods and applications using statistical syntactic and neural approaches Divided into four sections it clearly demonstrates the similarities and differences among the three approaches The second part deals with the statistical pattern recognition approach starting with a simple example and

finishing with unsupervised learning through clustering Section three discusses the syntactic approach and explores such topics as the capabilities of string grammars and parsing higher dimensional representations and graphical approaches Part four presents an excellent overview of the emerging neural approach including an examination of pattern associations and feedforward nets Along with examples each chapter provides the reader with pertinent literature for a more in depth study of specific topics International Conference on Correlation Optics ,1999
