

## Chapter 6 Notes – Volcanoes

- There are currently 1500 volcanoes in the world that are classified as active
- Only around 20 active volcanoes have a complete network of monitoring instruments
- Mount Nyiragongo is an active volcano in the Congo that has the fastest lava flow on Earth and threatens the city of Goma
- Mount St. Helens eruption in Washington state in 1980 was the most destructive volcanic eruption in US history
- Most Active Volcanoes = along convergent plate boundaries (such as the Ring Of Fire)
  
- Viscosity = resistance to flow
  - The viscosity of magma increases when the temperature decreases
- More violent eruptions occur where gases cannot escape easily
  - The viscosity of magma increases with increased silica content AND decreased temperature
- Different types of plate boundaries have different magma compositions (due to partial melting of different source rocks)
  - Basaltic magmas are usually at divergent plate boundaries and near hot spots
  - Andesitic magmas AND rhyolitic magmas occur at convergent plate boundaries
  
- 3 reliable indicators of a volcanic eruption prior to an eruption
  - Increased frequency of earthquakes
  - Rapid changes, deformations, in the shape of a volcano
  - Large emissions of common volcanic gases
- Days before an eruption there are lots of earthquakes each day
  
- Products of volcanic eruptions divide into
  - Airborne elements
    - Lateral blast, tephra, volcanic gases
  - Flows on the ground
    - Lava, pyroclastic flows, lahars
  
- Lateral blasts = sideways blasts that devastate large areas adjacent to volcano
- Tephra = particles of all sizes that are blasted into the air during a volcanic eruption
- Volcanic gases = usually sulfur dioxide and carbon dioxide and water vapor
- Pyroclastic flow = dense, hot, flow (ash, lava, and gases) that races down volcano's slope
- Lahars = mud flows formed when fine grained tephra mixes with water from snow melt or streams

aspects of an economic crisis which affects all walks of life Well men in almost every epoch in history have maintained that they were going through a crisis which was supposed to be always more grave than any preceding critical phase Very often those crises were not of an economic nature but concerned either health the political structure the opportunity of acquiring knowledge and so on I think that we would consider today that some of those claims that were made in various historical epochs were often exaggerated if viewed from a historical point of view However it seems undeniable that we at present are in the middle of a universal economic crisis which has affected almost every facet of our daily life And yet the fact that despite these adverse conditions it is still possible to gather scholars from all corners of the world to deal with often sheer theoretical and sometimes abstract pursuits is a refutation of any facile pessimism it is reassuring to all who wonder where political and social events are taking us Our salvation may well come from those acts of the mind so characteristic of the pure scientist and scholar
