

MACROECONOMICS

1. INTRODUCTION

Macroeconomics

This is the branch of economics that attempts to analyze and explain the interrelationships between aggregate (totals) variables such as output, employment, interest rates, money and prices in the economy. These are the key variables that determine economic activities and level of national income in an economy. Macroeconomics therefore analyzes the performance of the economy as a whole.

Macroeconomics deals with the following:

- (i) Total output of goods and services (GNP). GNP is the value of all final goods and services produced by nationals of a country irrespective of where they are producing it.
 - What determines the GNP level?
 - Why is it that GNP grows at a lower rate in some years than in others?
- (ii) It measures GDP. GDP is the total sum of expenditure on *final goods and services* produced in an economy. It includes all consumers' expenditure on goods and services, except for the purchase of new houses which is included in *gross fixed capital formation*.
- (iii) Total employment and unemployment levels
 - What proportion of total population is unemployed?
 - What determines levels of unemployment?
- (iv) General price level
 - Shows cost of purchasing by a typical consumer
 - Estimates inflation and anticipated effects
- (v) Balance of payment problem
- (vi) Exchange rates

RELATIONSHIP BETWEEN MICROECONOMICS AND MACROECONOMICS

Microeconomics

- Deals with the behaviors of individual economic units. These units include consumers, workers, investors, and owners of land, business firms, infant, any individual or entity that plays a role in the function of our economy.
- Microeconomics explains how and why these units make economic decisions. For example, it explains how consumers make purchasing decision and how their choices are affected by changing prices and income
- It also explains how firms decide how many workers to hire and how workers decide where to work and how much work to do.
- Another important concern of microeconomics is how economic units interact to form large units-markets and industries. By studying the behavior and interaction of individual firm and consumers, microeconomics reveals how industries and markets operate and evolve, why they differ from one another, and how they are affected by government policies and global economic conditions.

Macroeconomics

By contrast, macroeconomics, the other major branch of economics, deals with aggregate economic quantities, such as the level and growth rate of national output, interest rates, unemployment and inflation.

Handbook of Empirical Economics and Finance Aman Ullah, David E. A. Giles, 2016-04-19 Handbook of Empirical Economics and Finance explores the latest developments in the analysis and modeling of economic and financial data Well recognized econometric experts discuss the rapidly growing research in economics and finance and offer insight on the future direction of these fields Focusing on micro models the first group of chapters describes the statistical issues involved in the analysis of econometric models with cross sectional data often arising in microeconomics The book then illustrates time series models that are extensively used in empirical macroeconomics and finance The last set of chapters explores the types of panel data and spatial models that are becoming increasingly significant in analyzing complex economic behavior and policy evaluations This handbook brings together both background material and new methodological and applied results that are extremely important to the current and future frontiers in empirical economics and finance It emphasizes inferential issues that transpire in the analysis of cross sectional time series and panel data based empirical models in economics finance and related disciplines

Foundations of Environmental Economics Wolfgang Buchholz, Christiane Reif, Dirk Rübelke, 2024-12-24 This textbook provides a solid introduction to the theoretical and empirical aspects of environmental economics and their links to environmental policy In this second edition all chapters have been updated and restructured and new sections have been added to reflect a greater focus on climate policy Starting from the need to balance the social costs of pollution against the financial costs of emission abatement the book discusses the major issues that arise in the context of environmental policy such as the potential and limitations of monetary valuation of the environment and in particular the contingent valuation method and the design of environmental policy With regard to the choice of environmental policy instruments the book focuses on the price based instruments preferred by economists i e environmental taxes and emissions trading discussing in detail not only their many advantages but also their drawbacks The second edition especially focuses on green industrial policy as a complementary measure to price based instruments the distributional effects of environmental policies and the resulting challenges for political feasibility Moreover the book deals extensively with international environmental problems in particular climate protection which is a global public good that will be underprovided when certain countries refuse to cooperate and contribute Approaches to overcoming this underprovision are described in far more detail than in the first edition both theoretically and empirically in particular by assessing the functions of the many international environmental agreements in this field Finally a new chapter considers adaptation strategies especially in the water sector as an additional pillar of climate policy
