Hurt,J. Stepan,2005-12-30 In Part I the fundamentals of financial thinking and elementary mathematical methods of finance are presented The method of presentation is simple enough to bridge the elements of financial arithmetic and complex models of financial math developed in the later parts It covers characteristics of cash flows yield curves and valuation of securities Part II is devoted to the allocation of funds and risk management classics Markowitz theory of portfolio capital asset pricing model arbitrage pricing theory asset liability management value at risk The method explanation takes into account the computational aspects Part III explains modeling aspects of multistage stochastic programming on a relatively accessible level It includes a survey of existing software links to parametric multiobjective and dynamic programming and to probability and statistics It focuses on scenario based problems with the problems of scenario generation and output analysis discussed in detail and illustrated within a case study **New Operational Approaches for Financial Modelling** Constantin Zopounidis,2012-12-06 th This book is devoted to the 19 Meeting of the EURO Working Group on Financial Modelling held in Chania Crete Greece November28 30 1996 The EURO Working Group on Financial Modelling was founded in September 1986 in Lisbon The primary field of interest for the Working Group can be described as the development of financial models that help to solve problems facedby financial managers in the firm From this point of view the following objectivesof the Working Group are distinguished providing an international forum for exchange of information and experience on financial modelling encouraging research in financial modelling i e new techniques methodologies software empirical studies etc stimulating and strengthening the interaction between financial economic theory and the practice of financial decision making cooperating and exchanging information with universities and financial institutions throughout Europe According to the aboveobjectives the basic aim of this book is to present some new operational approaches i e neural nets multicriteria analysis new optimization algorithms decision software etc for financial modelling both in a theoretical and practical levels Thus the present volume is divided in nine chapters The first chapter refers to the new trends in financial modelling and includes two invited papers by Gil Aluja and Pardalos The second chapter involves papers on the topic of high performance computing and finance which is a European union project in which participate some members of the EURO Working Group on Financial Modelling Spronk Zenios Dempster etc Computational Economics David A. Kendrick,P. Ruben Mercado,Hans M. Amman,2011-10-23 The ability to conceptualize an economic problem verbally to formulate it as a mathematical model and then represent the mathematics in

software so that the model can be solved on a computer is a crucial skill for economists Computational Economics contains well known models and some brand new ones designed to help students move from verbal to mathematical to computational representations in economic modeling The authors focus however is not just on solving the models but also on developing the ability to modify them to reflect one's interest and point of view The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times Unlike other computational economics textbooks this book is organized around economic topics among them macroeconomics microeconomics and finance The authors employ various software systems including MATLAB Mathematica GAMS the nonlinear programming solver in Excel and the database systems in Access to enable students to use the most advantageous system The book progresses from relatively simple models to more complex ones and includes appendices on the ins and outs of running each program The book is intended for use by advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate students Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity The Mathematica Journal ,1995
