Data Information Literacy Jake Carlson,Lisa R. Johnston,2015-01-15 Given the increasing attention to managing publishing and preserving research datasets as scholarly assets what competencies in working with research data will graduate students in STEM disciplines need to be successful in their fields And what role can librarians play in helping students attain these competencies In addressing these questions this book articulates a new area of opportunity for librarians and other information professionals developing educational programs that introduce graduate students to the knowledge and skills needed to work with research data The term data information literacy has been adopted with the deliberate intent of tying two emerging roles for librarians together By viewing information literacy and data services as complementary rather than separate activities the contributors seek to leverage the progress made and the lessons learned in each service area The intent of the publication is to help librarians cultivate strategies and approaches for developing data information literacy programs of their own using the work done in the multiyear IMLS supported Data Information Literacy DIL project as real world case studies The initial chapters introduce the concepts and ideas behind data information literacy

such as the twelve data competencies The middle chapters describe five case studies in data information literacy conducted at different institutions Cornell Purdue Minnesota Oregon each focused on a different disciplinary area in science and engineering They detail the approaches taken how the programs were implemented and the assessment metrics used to evaluate their impact The later chapters include the DIL Toolkit a distillation of the lessons learned which is presented as a handbook for librarians interested in developing their own DIL programs The book concludes with recommendations for future directions and growth of data information literacy More information about the DIL project can be found on the project's website datainfolit.org

The project involved integrating new automated equipment and control systems into the existing production lines while minimizing downtime and ensuring seamless operation. One of the main obstacles we encountered was compatibility issues between the legacy equipment and the new control systems which led to communication errors and performance issues during testing. To overcome this challenge I collaborated closely with the project team to identify the root causes of the compatibility issues and develop solutions to address them. This involved modifying the communication protocols, updating firmware and software configurations and implementing hardware modifications as needed. I conducted thorough testing and validation to verify the effectiveness of the solutions and worked closely with the operations team to ensure a smooth transition to the new systems. Despite the challenges we were able to successfully complete the project on schedule and within budget, achieving significant improvements in productivity, efficiency and reliability for the client. This experience taught me the importance of proactive problem solving, effective communication and collaboration in overcoming obstacles and delivering successful outcomes in complex engineering projects.
