*Analytic Element Method* David R. Steward, 2020-08-31 Analytic Element Method AEM assembles a broad range of mathematical and computational approaches to solve important problems in engineering and science As the subtitle Complex Interactions of Boundaries and Interfaces suggests problems are partitioned into sets of elements and methods are formulated to solve conditions along their boundaries and interfaces Presentation will place an element within its landscape formulate its interactions with other elements using linear series of influence functions and then solve for its coefficients to match its

boundary and interface conditions Computational methods enable boundary and interface conditions of closely interacting elements to be matched with nearly exact precision commonly to within 8 12 significant digits Comprehensive solutions provide elements that collectively interact and shape the environment within which they exist This work is grounded in a wide range of foundational studies using exact solutions for important boundary value problems However the computational capacity of their times limited solutions to idealized problems commonly involving a single isolated element within a uniform regional background With the advent of modern computers such mathematically based methods were passed over by many in the pursuit of discretized domain solutions using finite element and finite difference methods Yet the elegance of the mathematical foundational studies remains and the rationale for the Analytic Element Method was inspired by the realization that computational advances could also lead to advances in the mathematical methods that were unforeseeable in the past
