Conceptual Spaces:

Conceptual Spaces Peter Gärdenfors, 2004-01-30 Within cognitive science two approaches currently dominate the problem of modeling representations. The symbolic approach views cognition as computation involving symbolic manipulation. Connectionism, a special case of associationism, models associations using artificial neuron networks. Peter Gärdenfors offers his theory of conceptual representations as a bridge between the symbolic and connectionist approaches. Symbolic representation is particularly weak at modeling concept learning, which is paramount for understanding many cognitive phenomena. Concept learning is closely tied to the notion of similarity, which is also poorly served by the symbolic approach. Gärdenfors's theory of conceptual spaces presents a framework for representing information on the conceptual level. A conceptual space is built up from geometrical structures based on a number of quality dimensions. The main applications of the theory are on the constructive side of cognitive science; as a constructive model, the theory can be applied to the development of artificial systems capable of solving cognitive tasks. Gärdenfors also shows how conceptual spaces can serve as an explanatory framework for a number of empirical theories, in particular those concerning concept formation, induction, and semantics. His aim is to present a coherent research program that can be used as a basis for more detailed investigations.

Conceptual Spaces: Elaborations and Applications Mauri Kaipainen, Frank Zenker, Antti Hautamäki, Peter Gärdenfors, 2019-06-25 This edited book focuses on concepts and their applications using the theory of conceptual spaces, one of today's most central tracks of cognitive science discourse. It features 15 papers based on topics presented at the Conceptual Spaces Work 2016 conference. The contributors interweave both theory and applications in their papers. Among the first mentioned are studies on metatheories, logical and systemic implications of the theory, as well as relations between concepts and language. Examples of the latter include explanatory models of paradigm shifts and evolution in science, as well as dilemmas and issues of health, ethics, and education. The theory of conceptual spaces overcomes many translational issues between academic theoretization and practical applications. The paradigm is mainly associated with structural explanations, such as categorization and meronymy. However, the community has also been relating it to relations, functions, and systems. The book presents work that provides a geometric model for the representation of human conceptual knowledge that bridges the symbolic and the sub-conceptual levels of representation. The model has already proven to have a broad range of applicability beyond cognitive science and even across a number of disciplines related to concepts and representation.

Reasoning with Concepts Peter Gärdenfors, Matias Osta-Velez, 2026-05-26 A unified treatment of different types of reasoning with concepts, such as category-based induction, nonmonotonic reasoning, analogies, and generics. Psychologists and philosophers have worked on topics such as category-based induction, nonmonotonic reasoning, analogies, and generics, but these problems have largely been investigated independently. In *Reasoning with Concepts*, Peter Gärdenfors and Matias Osta-Velez bring them all together by presenting models built on the theory of conceptual spaces. This theory offers a rich

framework for modeling many aspects of the structure of concepts In particular it allows the definition of measures for similarity typicality diagnosticity and coherence of concepts notions long employed informally by psychologists and philosophers While probabilistic models exist for some of these notions no comprehensive formal framework has previously encompassed them all The proposed measures here based on distances in conceptual space and prototypes generate novel testable predictions while unifying previously disparate theoretical territories Furthermore the models can be implemented in artificial systems that deal with different forms of reasoning

Applications of Conceptual Spaces Frank Zenker, Peter Gärdenfors, 2015-04-16 This volume provides an overview of applications of conceptual spaces theory beginning with an introduction to the modeling tool that unifies the chapters The first section explores issues of linguistic semantics including speakers negotiation of meaning Further sections address computational and ontological aspects of constructing conceptual spaces while the final section looks at philosophical applications Domains include artificial intelligence and robotics epistemology and philosophy of science lexical semantics and pragmatics agent based simulation perspectivism framing contrast sensory modalities and music among others This collection provides evidence of the wide application range of this theory of knowledge representation The papers in this volume derive from international experts across different fields including philosophy cognitive science linguistics robotics computer science and geography Each contributor has successfully applied conceptual spaces theory as a modeling tool in their respective areas of expertise Graduates as well as researchers in the areas of epistemology linguistics geometric knowledge representation and the mathematical modeling of cognitive processes should find this book of particular interest

The Geometry of Meaning Peter Gärdenfors, 2014-01-17 A novel cognitive theory of semantics that proposes that the meanings of words can be described in terms of geometric structures

Landscape Simon Bell, 1999 Providing a fresh approach to the theory of design Landscape Pattern Perception and Process synthesizes planning design and ecology and shows a new view of where design can develop The book brings together the work and subject areas of a range of disciplines including psychologists philosophers geologists ecologists cultural geographers foresters urban planners and landscape architects and synthesizes all these together Since many landscape and environmental problems require multi disciplinary approaches for their solution this book demonstrates how the best integration can be achieved Highly illustrated it contains examples from North America Canada Europe and Australasia Glossary references and further reading provide the reader with guidance and back up resources

Mathematics is the biometer of intellectual evolution Hence the determination of the status quo of the intellect at any time can be accomplished most satisfactorily by applying to it the rigorous measure of the mathematical method The intellect has but one true divining rod and that is mathematics By day and by night it points the way unerringly so long as it leads through materiality but falteringly blindly fatally when that way veers into the territory of vitality and spirituality Wherefore when we have wished to ascertain the real status of the intellect as well as its limitations tendencies possibilities we have turned to its conduct in the field of mathesis where it is least trammelled in its ingressive and egressive motivations because of the natural and easy accommodation which is offered for intellectual movement Whether there are signs of moribundity or symptomatic evidences of marked growth or of a termination of intellectual regnancy or whatever may be the occasion for the examination no surer index than the mathematical may be found for the purpose Full logical justification is therefore claimed for the choice of mathematical evidences to test the assumption that a new era of conscious mental conquest is opening for the vanguard of humanity and sequently for the human family

"Sula" and the Question of Social Identity in African American Fiction Imad Guemmah,2014-07-07 Research Paper undergraduate from the year 2010 in the subject Literature Africa Mohamed I University literaturevand human sciences course extensive reading language English abstract The paper approaches an exploration of two major themes in Sula social identity and gender subalternity I would begin with an overview of the major points that mark the novel and then shift to violently serious disagreements that bore reference to the submissive subaltern position that Sula had to encounter It is common sense to assume a certain Manichean worldview for societies are bound to declare unorthodox conduct as persona non grata This will pave the way for questing a priori justifications to the meaning of reality and illusion Afterwards I will emphasize the social racial and psychological facets of resistance and representation which portray oppressing challenges within society These result in clear cut demarcations which in the event of being drawn ontological questions germane to identity prove primordial Next I am highlighting philosophical explanations of self and other based on two critical angles androcentrism i e David Hume Emanuel Kant and Durkheim and feminism i e Julia Kristeva and Simone de Beauvoir I am eventually positioning the debate on the narrative platform as being an arena of tension between central self and peripheral other The analysis is held from a postmodern perspective I would therefore attempt to build a bridge between the discourse of Morrison who is addressing her message in the name of Sula and that of postmodernism which is a deviation from representation and a turn towards self reflexiveness

Adding a New Dimension to Education Cora Lenore Williams,1928 **The use of card sorting in a brain study. A comparison with the concept categories of the study by Huth, de Heer, Griffiths, Theunissen, and Gallant** Carina Kühne,2019-07-30 Seminar paper from the year 2018 in the subject Psychology Cognition grade 1 0 University of Twente Behavioural Management and Social Sciences language English abstract The current study tested whether humans

consciously group words into clusters in the same way as the results of an fMRI study suggest. Doing this it is referred to the study by Huth de Heer, Griffiths, Theunissen, and Gallant in which increased brain activity in certain areas was detected while people listened to certain words. Based on these brain areas, the words could be categorized. For the current study, 50 of these words were selected and used to perform an open card sorting and a questionnaire. The sample comprised 17 participants. Using a chi squared test, the relationship between the categorization in the card sorting and in the study was analysed as was the relationship between the two specific categories, violence and time, using a parametric test for independent samples. With regard to the analysis of the questionnaire, t tests were used to compare categories with each other and with filler words. The results of the card sorting revealed a significant relationship between clusters in the card sorting and the categories of the study. In addition, the categories, violence and time, were found to be significantly different while increased proximity values occurred within the categories. The questionnaire showed that concepts were more closely related to the categories they originate compared to filler items and that concepts within the category, time, were rated as better fitting than concepts within the category, violence. The results of the current study suggest that humans indeed consciously categorise concepts in a similar way as the brain activation implies. Words within those categories are related to each other and clearly distinguishable from words in other categories.
