Microprocessor Architectures Henk Corporaal,1998 Exploring new trends in computer technology Corporaal introduces an innovative and exciting concept Transport Triggered Architecture TTAs Unlike most traditional architectures

where programmed operations trigger internal data transports TTAs function through programming the data transports themselves As a result the new architecture alleviates bottlenecks allows for new code generation optimizations and exploits hardware more efficiently Founded on the author s recent research this book evaluates the attributes of different classes of architectures It demonstrates how TTAs can be used as a template for automatic generation of application specific processors and highlights their suitability for embedded system design Several commercial TTA implementations have proven its concepts and advantages Features includes Complexity analysis of the data path of Instruction Level Parallel processors particularly of VLIW Very Long Instruction Word and super pipelined processors Derivation of the transport triggering concept illustrating processor simplification In depth analysis of the architecture design space of TTAs and evaluation of architecture parameters Examination of the control and pipelining of instruction function and register units Description of a trajectory for the automatic synthesis of TTAs for arbitrary applications written in a high level language Detailed description of a prototype TTA processor enabling the reader to design an embedded computer system with excellent cost performance ratio Microprocessor Architectures is cutting edge text which will prove invaluable to both industrial hardware and software engineers involved in embedded system design and to postgraduate electrical engineering and computer science students This clearly structured reference demonstrates the versatility of TTAs and explores their influential role in the next generation of computer architecture
