**Simulating Continuous Fuzzy Systems** James J. Buckley, Leonard J. Jowers, 2008-01-25 1 1 Introduction This book is written in two major parts The first part includes the introductory chapters consisting of Chapters 1 through 6 In part two Chapters 7-26 we present the applications This book continues our research into simulating fuzzy systems We started with investigating simulating discrete event fuzzy systems 7-13-14 These systems can usually be described as queuing networks Items/transactions arrive at various points in the system and go into a queue waiting for service The service stations preceded by a queue are connected forming a network of queues and service until the transaction finally exits the system Examples considered included Chinese shops emergency rooms project networks bus routes etc Analysis of all of these systems depends on parameters like arrival rates and service rates These parameters are usually estimated from historical data These estimators are generally point estimators The point estimators are put into the model to compute system descriptors like mean time an item spends in the system or the expected number of transactions leaving the system per unit time We argued that these point estimators contain uncertainty not shown in the calculations Our estimators of these parameters become fuzzy numbers constructed by placing a set of confidence intervals one on top of another Using fuzzy number parameters in the model makes it into a fuzzy system The system descriptors we want time in system number leaving per unit time will be fuzzy numbers

**Multi-Objective Optimization in Theory and Practice II: Metaheuristic Algorithms** André A. Keller, 2019-03-28 Multi Objective Optimization in Theory and Practice is a simplified two part approach to multi objective optimization MOO problems This second part focuses on the use of metaheuristic algorithms in more challenging practical cases The book includes ten chapters that cover several advanced MOO techniques These include the determination of Pareto optimal sets of solutions metaheuristic algorithms genetic search algorithms and evolution strategies decomposition algorithms hybridization of different metaheuristics and many objective more than three objectives optimization and parallel computation The final section of the book presents information about the design and types of fifty test problems for which the Pareto optimal front is approximated For each of them the package NSGA II is used to approximate the Pareto optimal front It is an essential handbook for students and teachers involved in advanced optimization courses in engineering information science and mathematics degree programs

**Maritime Skills on Vessels & Shore - The STCW Convention's Relevance & Recommendations** Dr. (Capt.) Vivek Jain, 2023-07-11 This Book is of the seafarers by the seafarers for the seafarers Seafarers are the core of all maritime trade and their expectations/perspectives alone should be at the centre of all solutions for maritime skills Taking this standpoint the editor has explored the issues of maritime skills with critical gaps following a framework of research methodology The issue of critical gaps in maritime skills is further exacerbated due to the impact on seafarers caused by changes in the ecosystem/status relationship with

stakeholders technology focus on renewable energy anxiety levels and so forth Furthermore stakeholders can no longer ignore the fact that seafarers are leaving a seagoing career after working for only a few years Therefore the editor has also explored the need to prepare seafarers for transition into maritime shore jobs to preserve their maritime skills within the maritime industry This exhaustive book can be used as a guide for further revisions or a revamp of the current STCW Convention The editor thereafter divided the researched critical gaps in maritime skills into four groups Jain s Model for Maritime Skills Panoptic Social Intelligence Upskilling Reskilling for onboard vessels skills and Portable Skills for future shore jobs Panoptic and Social Skills are core skills required for both on board vessels as well for maritime shore jobs Thereafter the editor embarked on a voyage to discover persuade collaborate with a number of exceptionally experienced subject matter experts over many months to collaboratively pursue many mini research projects across all selected maritime skills adopting specific methodology to plug these critical gaps These experts were drawn 1 from countries such as India the Philippines Romania South Korea Malaysia UAE the UK and Singapore 2 from both genders 3 from deck engine professionals settled ashore 4 with current experience in the industry and or at sea at a fundamental level and 5 from seafaring supplying nations recognising experiencing the relevant socio economic circumstances of seafarers From this book seafarers will not only find ideas on how to plug gaps in their maritime skills but also how they can transition with their existing skills to other maritime jobs such as marine superintendents marine managers designated persons ashore managers supervising new build second hand vessels IT managers in the maritime domain marine surveyors marine experts investigators marine pilots in ports maritime arbitrators managers in shipyards and so forth The solutions in this book will also resolve the issue of the shortage and retention of seafarers
