The Project

The Seabin is situated at the waters surface and is plumbed into a shore based water pump on the dock. The water gets sucked into the Seabin bringing all floating debris and floating liquids into the Seabin. We catch all the floating debris inside the Seabin and the water then flows out through the bottom of the bin and up into the pump on the dock.

The Seabin is easy to empty and replace inside mask. It can work 24 hours a day 7 days a week.

How It Works

Inside the Seabin we have a natural fiber "catch bag" which collects all the floating debris. When this is full or near to full, the marina worker simply changes the catch bag with another one.

The collected debris is then disposed of responsibly. Simple and easy is the seabin way to help the oceans. The

SeaBin Goal

- To help rid the oceans of plastics and pollution.
- To have a Seabin production by mid-end of 2016.
- To create Seabins from sustainable materials.
- To create and support local economies with the production and maintenance.
- To have future models of Seabins for specific locations.
- To educate people and cultures about being responsible for waste.
- To setup educational programs.
- To convert our captured plastics into energy.
- To reuse or recycle our Seabins for other uses and or applications.
- To have pollution free oceans.

seabin is for harbours and ports, where it is easy to ac-

The bin then can be easily monitored. The aim of the seabin is to stop garbage from leaving to the ocean.

We have designed the size of the Seabin and catch bag for safe working load for one person.
